VCI Executive Safety Dashboard

Quick User Guide

Version 1.0 – President Brief | Internal Use Only

Purpose

The dashboard provides a concise view of leading safety compliance, overdue required actions, claims, driver risk, and the divisions or individuals that may require follow-up.

Executive Focus: Use the dashboard to identify where performance is below goal, confirm whether required actions are overdue, and direct follow-up to the appropriate leader.

Use It in 60 Seconds

1. **Check the Last Refresh.** Results reflect the most recent completed manual refresh.
2. **Start on Page 1.** Review overall performance, goal gaps, required actions, and the Claims Overview.
3. **Filter only when needed.** Use Division, Office Location, or Employee In-Charge to narrow the review.
4. **Open the detail page.** Use Pages 2–4 only when a Page 1 result requires follow-up.
5. **Reset before a new review.** Select **Clear all filters** to return to the company-wide view.

What to Look for First

- Leading indicators below goal
- Overdue Manager or Employee JSOs
- Drivers with a score of 20+ or a worsening trend
- Claims volume, preventable vehicle accidents, recordable injuries, and total cost

---

Dashboard Page Map

Each page has one job. Begin with Page 1 and move deeper only when a result requires explanation or action.

Page	Use	Leadership Question Answered
1	**Executive Safety Overview**	Start here: performance against goals, overall grade, required actions, and Claims Overview.
2	**Manager JSO Follow-Up**	Identify eligible managers whose 30-day JSO is overdue or approaching its due date.
3	**Employee JSO Follow-Up**	Identify required employees whose 45-day JSO is overdue or approaching its due date.
4	**Driver Safety Review**	Review Lytx scores, worsening trends, overlapping safety records, and division-level follow-up.

Page 1 – Executive Safety Overview

- Compare Manager JSO, Employee JSO, Gate Check, and DVIR compliance with their goals.
- Use the average and grade as a summary; use the individual percentages to identify the actual gap.
- Review **Missing Actions Details** to identify the divisions and workers contributing to open requirements.
- Review **Claims Overview** for claim volume, accident responsibility, injuries, and total cost.

Pages 2 and 3 – Required JSO Follow-Up

- Page 2 lists eligible managers who are overdue or approaching the 30-day Manager JSO due date.
- Page 3 lists required employees who are overdue or approaching the 45-day Employee JSO due date.
- Use Division and Employee In-Charge to direct follow-up to the correct operating leader.

Page 4 – Driver Safety Review

- Prioritize drivers with a coachable score of 20+ and drivers whose trend is worsening.
- Use overlapping Lytx, deviation, occurrence, and Drive Check indicators as prompts for review—not proof of causation.
- Use the employee detail table to identify the driver and supervisor responsible for follow-up.

Key Measures and Goals

Indicator	Reporting Window	Goal
Manager JSO	30 days	**90%**
Employee JSO	45 days	**93%**
Gate Check	90 days	**87%**
DVIR	Current compliance	**87%**
Leading Performance Average	Average of available leading indicators	**89%**

Plain-Language Definitions

- **Manager JSO compliance:** Eligible managers with a completed JSO within the rolling 30-day requirement.
- **Employee JSO compliance:** Required employees with a completed JSO within the rolling 45-day requirement.
- **Gate Check compliance:** Completed or compliant Gate Checks compared with required Gate Checks for the applicable reporting window.
- **DVIR compliance:** Completed or compliant DVIRs compared with required DVIRs.
- **Coachable score:** A positive score indicates a coaching opportunity or risk; it is not a favorable result.
- **At Fault vehicle accident:** An Auto Liability occurrence marked Preventable.
- **Not At Fault vehicle accident:** An Auto Liability occurrence marked not preventable.
- **Recordable injury:** An injury matched to a claim with OSHA recordable criteria.
- **First Aid injury:** An incident classified as First Aid and not already classified as recordable.

- **Total Claims:** General Liability claims plus Vehicle Accidents plus matched Injury incidents.
- **Total Claims Cost:** Net incurred cost across the governed Claims and General Liability sources.

Grade Use: The grade summarizes the configured leading-performance thresholds. Always review the underlying percentages before assigning follow-up.

Filters and Interpretation

- Division, Office Location, and Employee In-Charge narrow applicable results to the selected operating context.
- Workforce Status defaults the workforce context to active workers where applicable.
- **Clear all filters** returns the page to its default company-wide view.

Important: Some sources do not contain every organizational field. A visual may remain company-wide when the selected filter is unavailable for that source.

How to Respond

- **Below-goal performance:** Identify the indicator and division driving the gap.
- **Overdue required action:** Confirm ownership, due date, and completion status.
- **Driver-risk signal:** Review the driver, supervisor, trend, and related records before acting.
- **Claims concern:** Review the mix of liability claims, preventable accidents, injuries, and cost.

Interpretation Guardrails

- Reporting windows vary by source; compare each measure with its stated window.
- Overlapping signals show where review may be warranted; they do not establish causation or label a worker or division as unsafe.
- Unmatched records remain in applicable company totals but may not appear under a specific worker or division.
- Manual refresh means results remain unchanged until the semantic model is refreshed and the refresh completes successfully.

Quick Leadership Sequence

Page 1 result → Elevated signal → Detail page → Responsible leader → Documented follow-up

Bottom Line: Use the dashboard to focus the conversation and assign follow-up. Use the underlying records and leadership review to determine cause and corrective action.
