VCI Executive HR Dashboard

Quick User Guide

Version 2.0 — Major Workforce Reporting Framework Redesign / Working Baseline
Internal Use Only

Purpose

The VCI Executive HR Dashboard provides a centralized view of workforce health, staffing activity, workforce movement, Talent Acquisition, retention, workforce capacity, organizational structure, and workforce conditions requiring leadership attention.

Version 2.0 reorganizes the dashboard into three complementary pages:

1. **Executive HR Dashboard** — enterprise-level workforce health, movement, Talent Acquisition, workforce distribution, replacement-cost impact, and executive alerts.
2. **COER Workforce Analysis** — focused primarily on field and revenue-generating workforce retention, turnover, separations, early-tenure attrition, and workforce-loss patterns.
3. **G&A Workforce Analysis** — focused primarily on corporate and support workforce capacity, composition, experience, availability, team structure, and workforce planning.

Version 2.0 expands the prior dashboard with:

- COER and G&A workforce-group analysis
- Workforce Group filtering
- Open Positions
- Open Requisitions
- Average Time to Hire
- Offer Acceptance Rate
- Estimated COER Employee Replacement Cost
- Replacement-cost assumptions
- Expanded Executive Workforce Alerts
- Separation Type analysis
- Hired, Never Started analysis
- Revised Executive Retention Insights

- Updated Turnover Impact Index calculations
- Redesigned G&A workforce-planning analysis
- Expanded workforce-capacity and experience analysis

The current dashboard remains a **working baseline**.

Existing targets, classifications, assumptions, and thresholds may be adjusted as HR and leadership review additional monthly and quarterly data.

New Talent Acquisition, retention, and workforce-planning metrics should initially be treated as organizational baselines until sufficient data exists to establish meaningful performance targets.

Data Availability Note

Dashboard calculations are based on workforce and Talent Acquisition information currently available to the reporting environment.

VCI currently uses SAP.

Prior workforce records were maintained in UKG beginning approximately in 2018, while earlier workforce records were primarily paper-based.

Historical data migration remains ongoing.

As a result:

Older historical workforce trends may not represent VCI's complete workforce history.

This is especially important when reviewing:

- Historical workforce headcount
- Historical hires
- Historical separations
- Historical turnover
- Year-over-year comparisons
- Tenure at separation
- Early-tenure attrition

Current and live workforce metrics have stronger source coverage because they are based on operational workforce and recruiting files consistently maintained and updated by HR.

Current and live results can therefore be used with greater confidence within the documented dashboard definitions and refresh timing.

Getting Started

1. Check the Last Refresh

Before reviewing dashboard results, confirm the **Last Refresh** date and time.

Current workforce status, Talent Acquisition activity, LOA, hiring, separations, and other conditions may change frequently.

---

2. Begin with the Executive HR Dashboard

Use Page 1 to understand the overall enterprise workforce position.

Review:

- Current workforce size
- Recent hiring
- Recent separations
- Employees on LOA
- Turnover
- Separations YTD
- Workforce maturity
- Net workforce growth
- Open Positions
- Open Requisitions
- Average Time to Hire
- Offer Acceptance Rate
- Estimated COER Employee Replacement Cost
- Workforce trends
- Workforce status
- Geographic and supervisor distribution
- Executive Workforce Alerts

---

3. Move to COER Workforce Analysis

Use Page 2 when deeper retention and workforce-loss analysis is needed.

Review:

- Turnover
- Separation volume
- Early-tenure attrition
- Executive Retention Insights
- Turnover Impact Index
- Separation Type
- Turnover concentration
- Supervisor and Job Title retention patterns
- Tenure at separation
- Hired, Never Started employees
- Employee-level separation records

Page 2 is primarily designed for the **COER workforce**.

---

4. Use G&A Workforce Analysis for Workforce Planning

Use Page 3 when you need to understand corporate and support workforce capacity and structure.

Review:

- Current workforce size
- Recent hiring and separations
- LOA
- Net workforce growth
- Average Team Size
- Workforce composition
- Workforce tenure
- Supervisor team size
- Workforce experience
- Workforce availability
- Leadership and workforce-planning conditions

Page 3 is primarily designed for the **G&A workforce**.

---

5. Use Filters

Available filters vary by page.

Common filters include:

- Trend Analysis Period
- Office
- Division
- Workforce Group
- Supervisor
- Employment Status, where available

Workforce Group

Workforce Group allows applicable analysis to be filtered to:

- **COER**
- **G&A**
- **All**

COER is the current working workforce grouping used primarily for field and revenue-generating operations.

G&A refers to **General & Administrative** workforce functions and primarily represents corporate and support employees.

The Workforce Group classification remains subject to HR review as the organization finalizes workforce-group membership.

Although the slicer can be used for exploration:

- Page 2 is primarily a COER analytical page.
- Page 3 is primarily a G&A analytical page.

---

6. Trend Analysis Period

The Trend Analysis Period controls the reporting period for applicable historical and selected-period measures.

Examples include:

- Workforce Trend
- Turnover Rate
- Monthly separations
- New Hires vs Separations
- Workforce Movement Trend
- Net Workforce Growth
- Average Time to Hire
- Offer Acceptance Rate
- Estimated Replacement Cost

Some KPIs represent the current workforce or a fixed rolling period and therefore may not change in the same way.

Examples include:

- Total Active Employees
- Employees on LOA
- New Hires — Last 30 Days
- Separations — Last 30 Days

If a selected period extends into the future, applicable measures may use today's date as the effective reporting end date.

---

7. Use Clear All Slicers

A **Clear All Slicers** button is available on dashboard pages.

Use it when:

- Beginning a new analysis
- Returning to the page's default view
- Comparing Power BI with another report
- A metric appears unexpectedly high or low
- You are unsure whether previous filters remain active

Page 1 — Executive HR Dashboard

Page Question

Enterprise Workforce Intelligence — How is the workforce performing across growth, stability, talent acquisition, and operational capacity?

Page 1 provides the enterprise-level starting point for workforce review.

Operational Metrics

Business Question

What is the current operational state of the workforce?

👥 Total Active Employees

Shows the number of employees currently classified as **Active**.

Employees currently classified as:

- LOA
- Separated

are not included.

Trend

Compares the current active population with the estimated active population approximately 30 days earlier.

Use It To Understand

- Current working workforce size
- Recent workforce growth or decline
- Overall staffing capacity

An increase is not automatically favorable, and a decrease is not automatically unfavorable.

Review it together with hiring, separations, and business demand.

➕👤 New Hires — Last 30 Days

Shows employees hired during the latest rolling 30-day period.

Reporting Window

Today − 30 Days < Hire Date ≤ Today

Trend

Compares the latest 30 days with the previous 30 days.

Use It To Understand

- Recent hiring activity
- Workforce expansion
- Replacement hiring
- Onboarding demand

High hiring does not automatically mean workforce growth if separations are also high.

🚪 Separations — Last 30 Days

Shows employee separations during the latest rolling 30-day period.

Reporting Window

Today − 30 Days < Separation Date ≤ Today

Trend

Compares the latest 30 days with the previous 30 days.

Use It To Understand

- Recent workforce loss
- Retention pressure
- Replacement-hiring demand
- Potential knowledge loss

🏥 Employees on LOA

Shows employees currently classified as being on **Leave of Absence**.

These employees remain employed but are temporarily unavailable for regular work.

Current Target

10 employees

Use It As

A workforce-capacity planning measure.

It is **not an employee-performance measure**.

Workforce Movement & Stability

Business Question

Is the workforce growing sustainably, and where are stability pressures emerging?

🔄 Turnover Rate

Shows employee separations relative to the average workforce population during the selected reporting period.

Calculation

Total Separations ÷ Average Monthly Workforce Headcount

Average Monthly Workforce Headcount uses workforce snapshots across the selected period.

Employees on LOA remain part of the employed workforce for this denominator.

Trend

Compares turnover with the comparable prior-year period where applicable.

Turnover changes are expressed in **percentage points**.

Important

Turnover can exceed 100% in small or rapidly changing workforce groups.

A value above 100% does not automatically indicate a calculation error.

Review Turnover With

- Separation Volume
- Average Monthly Headcount
- New Hires
- Net Workforce Growth
- Early-Tenure Attrition
- Turnover Impact Index

👋 Separations YTD

Shows employee separations occurring from the beginning of the current calendar year through the applicable reporting date.

Trend

Compares current YTD separations with the comparable prior-year YTD period.

Use It To Understand

- Cumulative workforce loss
- Separation activity compared with prior year
- Whether workforce loss is accelerating or slowing

🌱 Workforce <1 Year

Shows the percentage of the current employed workforce with less than one year of tenure.

The current workforce for this metric includes:

- Active
- LOA

Separated employees are excluded.

A Higher Percentage May Reflect

- Recent growth
- Increased hiring
- Higher onboarding demand
- Training demand
- Greater early-retention exposure

It is not automatically unfavorable.

📈 Net Workforce Growth

Calculation

New Hires − Separations

Interpretation

Positive
Workforce growth

Negative
Workforce decline

Zero
No net movement

Current Reference

0

Talent Acquisition

Business Question

How effectively are hiring needs converting into accepted offers and planned starts?

🪑 Open Positions

Shows the number of requested positions that remain unfilled as of the applicable reporting date.

Use It To Understand

- Outstanding hiring demand
- Potential workforce gaps
- Recruiting workload
- Capacity needs

Important

Open Positions counts requested seats.

A single requisition may represent multiple positions.

If a position request contains several seats but the source does not separately identify how many are filled, partial filling may not be fully reflected.

Target

Working Baseline — No Formal Target Yet

📋 Open Requisitions

Shows the number of distinct recruiting requisitions that remain open as of the applicable reporting date.

Use It To Understand

- Active recruiting workload
- Number of open hiring requests
- Hiring-demand concentration

Important

Open Requisitions and Open Positions measure different things.

One requisition may contain more than one requested position.

The two KPI values therefore should not be expected to match.

Target

Working Baseline — No Formal Target Yet

⏱️ Average Time to Hire

Shows the average number of days between:

Offer Accepted Date

and

Potential Start Date

for applicable accepted offers during the selected period.

Calculation

Potential Start Date − Offer Accepted Date

Lower Is Generally Favorable

A shorter duration generally indicates less time between candidate commitment and planned workforce entry.

Review Longer Durations For

- Pre-start processing
- Candidate readiness
- Compliance steps
- Onboarding timing
- Operational scheduling

Trend

Compares the selected period with the equivalent prior-year period.

Target

Working Baseline — No Formal Target Yet

🤝 Offer Acceptance Rate

Shows the percentage of offers extended during the applicable offer cohort that were accepted by the effective period end date.

Calculation

Offers Accepted ÷ Offers Extended

Higher Is Generally Favorable

A declining Offer Acceptance Rate may warrant review of:

- Offer competitiveness
- Candidate expectations
- Recruiting process
- Role fit
- Hiring timing
- Candidate experience

Trend

Displayed as a **percentage-point change** compared with the equivalent prior-year period.

Target

Working Baseline — No Formal Target Yet

Estimated COER Employee Replacement Cost

Business Question

What is the estimated financial impact of COER employee separations during the selected period?

Shows the estimated financial impact of applicable COER employee separation activity.

Current Planning Estimate

$5,400 per applicable COER employee separation

Calculation

Applicable COER Separations × $5,400

The Estimate Includes

- Separation administration
- Recruiting and advertising
- Recruiter / HR labor
- Background, drug, driving, and certification costs
- Onboarding
- Training
- Uniform, equipment, vehicle, and technology setup
- Overtime or temporary coverage
- Ramp-up productivity loss

Important

This is a **planning estimate** provided through VCI HR leadership's replacement-cost assumptions.

It is not:

- An actual accounting expense
- An exact cost for every employee
- A salary-based replacement calculation
- A universal industry benchmark

Trend

Compares the selected-period estimated impact with the equivalent prior-year period.

Estimated Replacement Cost Assumptions

Business Question

What cost assumptions are used to estimate the replacement impact of a COER employee separation?

Cost Component	Estimated Cost
Separation / Admin Cost	$200
Recruiting & Advertising	$150
Recruiter / HR Labor	$200
Background / Drug / Driving / Certification Costs	$250
Onboarding Cost	$150
Training Cost	$550
Uniform / Equipment / Vehicle / Technology Setup	$700
Overtime / Temporary Coverage Cost	$1,000
Ramp-Up Productivity Loss	$2,200
Total Estimated Replacement Cost per COER Employee	**$5,400**

The assumptions should be reviewed if HR changes the replacement-cost methodology or applicable workforce population.

Workforce Trend

Question

How is VCI's total workforce changing over time?

Shows historical workforce headcount across the selected Trend Analysis Period.

Use this chart to identify:

- Long-term growth
- Workforce contraction
- Seasonal patterns
- Sudden staffing changes
- Changes in overall workforce size

Employees on LOA remain part of historical employed workforce headcount.

Historical trends should be interpreted within the limits of currently available legacy data.

Workforce Status

Question

How is the current workforce distributed across active, LOA, and separated status?

Shows the represented workforce by:

- Active
- LOA
- Separated

Use this visual as a simple status-composition reference.

New Hires vs Separations

Question

Are new hires keeping pace with workforce losses across VCI?

Displays New Hires and Separations by Month Year.

Interpretation

Hires above separations
Positive workforce movement

Separations above hires
Potential workforce decline

Similar values
Hiring may primarily be replacing workforce losses

Workforce Movement Trend

Question

How are hiring and turnover shaping enterprise workforce growth over time?

Displays:

- New Hires as columns
- Turnover Rate as a line
- Month Year on the time axis

Use It To Understand

Whether higher hiring periods are also experiencing elevated turnover.

Examples:

High hiring + low turnover
May indicate sustainable expansion

High hiring + high turnover
May indicate replacement hiring

Low hiring + high turnover
May indicate potential contraction

Workforce Distribution by Office

Question

Where is VCI's workforce concentrated geographically?

Shows workforce count by reporting Office.

Use it to understand:

- Largest workforce locations
- Geographic concentration
- Staffing dependencies
- Locations that may require additional support

Workforce Distribution by Supervisor

Question

Where are the largest concentrations of employees across supervisor teams?

Shows employee count by Unified Supervisor.

Use this visual with:

- Team experience
- Division
- Office
- Work complexity
- Organizational structure

before drawing conclusions about supervisor workload.

Workforce Distribution by State

Question

How is VCI's workforce distributed between California and Nevada?

Provides a direct geographic workforce comparison.

Use it to understand overall State-level staffing concentration.

Executive Workforce Alerts

Question

What enterprise workforce conditions require leadership attention right now?

Displays dynamic workforce alerts when defined conditions are triggered.

Current alerts may include:

- Recruiting capacity concerns
- Increased Estimated Replacement Cost
- Declining Offer Acceptance Rate
- LOA above target
- Recent workforce-flow concerns

Use the Alert As

A starting point for investigation.

Review the related KPI, chart, or detailed page before determining action.

Important

An alert identifies a condition.

It does not establish the cause of the condition.

Page 2 — COER Workforce Analysis

Page Question

Where are retention risks, turnover pressures, and separation patterns emerging?

Page 2 is designed primarily for the COER workforce and provides deeper analysis of workforce loss.

The page moves from:

What is happening?

↓

How is it changing?

↓

Where is it concentrated?

↓

When are employees leaving?

↓

Which teams or roles warrant investigation?

↓

Which employee records are contributing to the pattern?

Current filters include:

- Trend Analysis Period
- Office
- Division
- Workforce Group
- Supervisor

Retention Snapshot

Question

What is the current state of turnover and early-tenure attrition?

Summarizes:

- Total Active Employees
- Turnover Rate
- Separations YTD
- 30-Day Attrition Rate
- 60-Day Attrition Rate
- 90-Day Attrition Rate
- 180-Day Attrition Rate

30-Day Attrition Rate

Shows the percentage of eligible hires who separate within their first 30 days.

60-Day Attrition Rate

Shows the percentage of eligible hires who separate within their first 60 days.

90-Day Attrition Rate

Shows the percentage of eligible hires who separate within their first 90 days.

180-Day Attrition Rate

Shows the percentage of eligible hires who separate within their first 180 days.

Important

Each milestone uses an **eligible-hire population**.

For example, an employee hired only 20 days ago cannot yet be evaluated for 90-day or 180-day attrition.

These measures should currently be treated as organizational baselines.

Formal performance thresholds have not yet been established.

Executive Retention Insights

Question

Which retention risks and emerging workforce patterns require leadership attention?

Displays dynamically generated retention intelligence.

Insights may identify:

- Increased separation volume
- Division retention impact
- Office retention impact
- State turnover differences
- Supervisor retention concentration
- Job-title retention concentration
- Early-tenure attrition
- Early-tenure separation concentration
- Data-quality issues

Insight Categories

Retention Risk

Material turnover increases or meaningful retention concentration.

Emerging Pattern

Developing patterns requiring continued review.

Workforce Insight

Meaningful workforce context that may not represent immediate risk.

Data Quality

Source-data issues that may affect interpretation.

Important

These categories should not be interpreted as formal employee, supervisor, Division, or management performance ratings.

Turnover Impact Index

The Turnover Impact Index helps leadership prioritize retention investigation.

It combines:

Component	Weight
Turnover Rate	50%
Separation Share	30%
Separation Volume	20%

The resulting score ranges from:

0–100

What It Means

Higher scores indicate greater **relative retention impact** within the applicable comparison group.

What It Does Not Mean

The Impact Index is not:

- Turnover Rate

- A performance percentage
- A supervisor rating
- An employee rating
- A Division rating
- An industry benchmark

Why It Is Useful

A small workforce group can have a very high Turnover Rate from only a few separations.

The Impact Index balances:

- Rate
- Volume
- Share of total separations

so leadership can better prioritize where investigation may provide the greatest value.

Why the Score Can Change

The Index is normalized relative to the current peer population.

Changing filters can therefore change the score.

Turnover & Workforce

Turnover Rate by Month

Question

How is turnover changing over the selected period?

Shows Turnover Rate by Month Year.

Use this visual to identify:

- Sustained increases
- Declining turnover
- Stable periods

- Seasonal patterns
- Isolated spikes

Review monthly rate changes with workforce size and separation volume.

Separations by Month

Question

How is separation volume changing over the selected period?

Shows Total Separations by Month Year.

Remember:

Separation Volume asks:

How many employees left?

Turnover Rate asks:

How large was that loss relative to workforce size?

The two metrics may identify different peak periods.

Separation Type

Question

What types of separations are driving workforce loss during the selected period?

Shows separation activity according to the source-defined **Separation Type**.

Current categories may include:

- Voluntary
- Involuntary
- Never Started

Use this visual to understand the broad composition of workforce loss.

Important

Separation Type does not by itself explain why an employee left.

Additional validated separation-driver information would be required for causal analysis.

Turnover Concentration

Turnover Rate by Division

Question

Which divisions are experiencing the greatest turnover pressure?

Use the visual and tooltip context to review:

- Turnover Rate
- Total Separations
- Separation Share
- Average Monthly Headcount
- Turnover Impact Index

Do not prioritize a Division based on Turnover Rate alone.

Turnover Rate by Office

Question

Which office locations are experiencing the greatest turnover pressure?

Use:

- Turnover Rate
- Separation Volume
- Separation Share
- Average Monthly Headcount
- Impact Index

together to understand Office-level retention impact.

Early-Tenure Attrition

Early Attrition Rate

Question

How quickly are new employees separating within their first 30, 60, 90, and 180 days?

Displays:

- 30-Day Attrition Rate
- 60-Day Attrition Rate
- 90-Day Attrition Rate
- 180-Day Attrition Rate

These measures are currently working baselines.

Formal red/green performance thresholds have not yet been established.

Separations by Tenure Band

Question

At what stages of employee tenure are workforce losses most concentrated?

Current tenure bands include:

- 0–30 Days
- 31–60 Days
- 61–90 Days
- 91–180 Days
- 181 Days–1 Year
- 1–2 Years
- 2–5 Years
- 5–10 Years
- 10+ Years

- Unknown, where applicable

This visual answers:

At what tenure stage are actual separation events occurring?

It is different from Early Attrition Rate, which measures the percentage of eligible hires separating by each milestone.

Leadership & Retention

Turnover Rate by Supervisor

Question

Which supervisor teams are experiencing the greatest retention pressure?

Review:

- Turnover Rate
- Separation Volume
- Separation Share
- Team-size context
- Turnover Impact Index

Important

A high Supervisor Turnover Rate or Impact Index does not automatically mean poor supervisor performance.

It identifies a retention pattern requiring additional context.

Turnover Rate by Job Title

Question

Which job roles are experiencing the greatest turnover impact?

Use this visual to identify roles where workforce loss is concentrated.

Review:

- Turnover Rate
- Separation Volume
- Separation Share
- Average Monthly Headcount
- Turnover Impact Index

Potential areas for additional investigation may include:

- Recruiting
- Job expectations
- Onboarding
- Training
- Job fit
- Work conditions
- Career development

The dashboard identifies patterns.

It does not establish causes.

Separation Detail

Question

Which employee separations are contributing to the selected turnover and attrition results?

The table may include:

- Employee Name
- Worker No.
- Separation Date
- Effective Hire Date
- Tenure at Separation
- Separation Tenure Band
- State
- Division

- Office
- Supervisor
- Title

Use this table to move from:

Dashboard signal → organizational pattern → individual records

Employee-level records should be used for investigation and validation.

Hired, Never Started

The current dashboard working definition identifies employees whose:

Hire Date = Separation Date

This is a supporting separation-detail analysis.

It is not currently treated as a standalone Early-Tenure Attrition KPI.

Hired, Never Started — Detail

Question

Which hires were recorded as separating on their hire date?

Shows same-day hire/separation employee records.

Use it to identify individual cases requiring additional review.

Hired, Never Started — Job Title

Question

Which job roles are most affected by employees who are hired but never started?

Shows same-day hire/separation records by Job Title.

Use this visual to identify role concentration.

Important

The chart identifies where the records occur.

It does not determine why employees did not begin sustained employment.

Never Started vs Hired, Never Started

These are not automatically the same definition.

Never Started in Separation Type is a source-defined classification.

Hired, Never Started uses the dashboard rule:

Hire Date = Separation Date

Treat them as separate analytical concepts unless HR formally confirms they are equivalent.

Estimated COER Employee Replacement Cost

Page 2 repeats the replacement-cost KPI so financial workforce-loss impact can be reviewed alongside retention analysis.

Calculation

Applicable COER Separations × $5,400

Refer to Page 1 for the full replacement-cost assumptions.

Page 3 — G&A Workforce Analysis

Page Question

How are workforce capacity, experience, and organizational structure evolving across G&A functions?

Page 3 is primarily designed for G&A corporate and support workforce planning.

Current filters include:

- Trend Analysis Period
- Office
- Division
- Workforce Group
- Supervisor
- Employment Status

Workforce Snapshot

Question

What is happening across our workforce today?

Summarizes:

- Total Active Employees
- New Hires — Last 30 Days
- Separations — Last 30 Days
- Employees on LOA
- Net Workforce Growth
- Average Team Size

Net Workforce Growth

Calculation

New Hires − Separations

Interpretation

Positive
Workforce expansion

Negative
Workforce decline

Zero
No net movement

Current Reference

0

Average Team Size

Shows the average number of active employees assigned to active supervisors.

Calculation

Active Employees Assigned to Supervisors ÷ Active Supervisor Count

Current Reference

12 employees per supervisor

Important

Team size should always be interpreted alongside:

- Work complexity
- Geography
- Employee experience
- Organizational structure
- Supervisor responsibilities

The reference of 12 is a working benchmark.

Workforce Composition

Workforce by Division

Question

Which divisions have the largest workforce?

Shows current workforce count by Division.

Use this visual to understand:

- Organizational scale
- Staffing concentration
- Relative Division size
- Workforce-planning needs

Workforce by Office

Question

Which offices have the largest workforce?

Shows current workforce count by Office.

Use it to understand:

- Where employees are concentrated
- Geographic workforce dependencies
- Office support needs
- Workforce-planning considerations

Workforce by Supervisor

Question

Which supervisors manage the largest teams?

Shows current employee count by Unified Supervisor.

Use this visual as a structural workforce-planning reference.

Team size should not be interpreted as a supervisor-performance score.

Workforce Dynamics

Net Workforce Growth

Question

Is our workforce growing or shrinking over time?

Shows by Year Quarter:

- New Hires
- Separations
- Net Workforce Growth

Interpretation

Positive net growth
Hiring exceeded separations

Negative net growth
Separations exceeded hiring

Zero
Hiring and separations were equal

Use quarterly trends to distinguish:

- Growth
- Contraction
- Replacement hiring
- Periods of limited workforce movement

Hiring vs Separations

Question

Are hiring levels keeping pace with workforce losses?

Compares hiring and separation activity by Year Quarter.

Interpretation

Hires above separations
Hiring is outpacing workforce loss

Separations above hires
Staffing may decline unless hiring increases

Similar values
Hiring may mainly be replacing departing employees

Workforce Tenure Distribution

Question

Is our workforce building long-term experience and stability?

Groups employees into tenure bands such as:

- Under 1 Year
- 1–3 Years
- 3–5 Years
- 5–10 Years
- 10+ Years

The visual may distinguish:

- Current Active Workforce
- Temporarily Unavailable
- Workforce Loss

Tenure Rule

Seniority Date is used when available.

Hire Date is used otherwise.

Employees on LOA remain part of the current employed workforce for applicable tenure analysis.

Use It To Understand

- Workforce maturity
- Institutional knowledge
- Early-tenure exposure
- Long-term experience
- Succession-planning needs

Workforce Effectiveness

Supervisor Direct Reports

Question

Are supervisors managing balanced and sustainable team sizes?

Shows the number of employees assigned to each Unified Supervisor.

Use It To Review

- Management span
- Team-size concentration
- Supervisor workload
- Organizational structure

Important

The dashboard does not currently establish that a specific number of direct reports is inherently balanced or sustainable.

Larger teams may reflect:

- Greater leadership workload
- Broad responsibility
- Experienced teams

- Organizational structure

Smaller teams may reflect:

- Specialized work
- Narrow functional scope
- Geographic structure

Use operational context before drawing conclusions.

Average Workforce Tenure by Division

Question

Where is workforce experience and institutional knowledge concentrated?

Shows average current workforce tenure by Division.

Applicable current workforce calculations include:

- Active
- LOA

Higher Tenure May Indicate

- Greater experience
- Institutional knowledge
- Mature workforce structure

Lower Tenure May Reflect

- Recent growth
- Increased hiring
- Turnover
- Onboarding demand

Very high tenure may also indicate potential succession-planning exposure.

Leadership & Workforce Planning

Workforce LOA by State

Question

How is leave of absence affecting workforce availability across California and Nevada?

Shows LOA Rate by State.

Calculation

Employees on LOA ÷ Current Employed Workforce

Current Employed Workforce includes:

- Active
- LOA

Separated employees are excluded.

Why Use a Rate?

A raw LOA count can be misleading when State workforce populations differ.

LOA Rate standardizes the comparison.

Important

A higher LOA Rate means a larger share of the current workforce is temporarily unavailable.

It does not automatically indicate poor performance.

Target

Working Baseline — No Formal Target Yet

Workforce Experience by Supervisor

Question

Which supervisors lead the least experienced teams?

Shows average current-team tenure by Unified Supervisor.

Applicable team calculations include:

- Active
- LOA

Lower-Tenure Teams May Need

- Additional onboarding
- Training
- Supervisor support
- Knowledge transfer
- Early-retention monitoring

Higher-Tenure Teams May Provide

- Strong institutional knowledge
- Greater team experience

but may also warrant succession-planning review.

Important

This visual reflects **team experience**, not supervisor performance.

Working Experience Categories

Average Team Tenure	Interpretation
7+ Years	Established Team
5–6.9 Years	Experienced Team
3–4.9 Years	Developing Team
2–2.9 Years	Growing Team
Below 2 Years	Emerging Team

These are working interpretation ranges, not formal performance standards.

Current Working Targets and Baselines

Metric	Current Target / Status
Employees on LOA	10
Average Team Size	12
Net Workforce Growth	0
Turnover Rate	Working Baseline — No Formal Target Yet
Workforce <1 Year	Contextual Indicator — No Formal Target Yet
Separations YTD	Contextual Indicator — No Formal Target Yet
Open Positions	Working Baseline — No Formal Target Yet
Open Requisitions	Working Baseline — No Formal Target Yet
Average Time to Hire	Working Baseline — No Formal Target Yet
Offer Acceptance Rate	Working Baseline — No Formal Target Yet
Estimated COER Employee Replacement Cost	Planning Estimate — No Performance Target
30-Day Attrition Rate	Working Baseline — No Formal Target Yet
60-Day Attrition Rate	Working Baseline — No Formal Target Yet
90-Day Attrition Rate	Working Baseline — No Formal Target Yet
180-Day Attrition Rate	Working Baseline — No Formal Target Yet
LOA Rate	Working Baseline — No Formal Target Yet
Turnover Impact Index	No Performance Target — Relative Prioritization Score

These are operating benchmarks and working baselines.

HR and leadership may adjust them after reviewing additional data and establishing more representative organizational ranges.

Quick Interpretation Reminders

- Higher hiring may represent growth or replacement hiring.
- Higher separations should be reviewed by tenure, Office, Division, Supervisor, Job Title, and Separation Type.
- Turnover Rate should be reviewed with Average Monthly Headcount and Separation Volume.
- Turnover above 100% can occur in small or rapidly changing populations.
- Turnover Impact Index is a relative prioritization score, not a performance rating.
- Early Attrition Rates use eligible-hire populations.
- Separations by Tenure Band describes actual separation events rather than eligible-hire rates.
- Workforce <1 Year is not automatically unfavorable.
- A high number of Open Positions may reflect growth as well as unfilled demand.
- Open Positions and Open Requisitions measure different concepts.
- Lower Average Time to Hire is generally favorable, but quality and compliance requirements still matter.
- Offer Acceptance Rate should be interpreted together with recruiting demand and hiring activity.
- Estimated Replacement Cost is a planning estimate, not an accounting expense.
- Hired, Never Started and the Separation Type Never Started are separate analytical concepts unless HR confirms otherwise.
- Larger teams may indicate management-capacity pressure or an experienced, self-sufficient team.
- Smaller teams may reflect specialization, organizational structure, or geographic coverage.
- Lower tenure may reflect growth, turnover, or onboarding demand.
- LOA is a workforce-capacity condition.
- LOA employees remain employed and are included in applicable current-workforce and tenure calculations.
- Workforce Experience by Supervisor describes team tenure, not supervisor performance.
- Older historical data may be incomplete because legacy-data migration remains ongoing.
- Current and live metrics have stronger source coverage.
- Always check Last Refresh and active slicers before comparing results with another report.

Frequently Asked Questions

Why doesn't a KPI change when I change the Trend Analysis Period?

Some KPIs represent the current workforce or a fixed rolling period rather than historical activity.

Examples include:

- Total Active Employees
- Employees on LOA
- New Hires — Last 30 Days
- Separations — Last 30 Days

Historical charts, turnover analysis, selected-period metrics, and applicable Talent Acquisition measures are more likely to respond directly to the selected dates.

Why do Page 1, Page 2, and Page 3 sometimes show different values?

The pages serve different analytical purposes.

- Page 1 provides the enterprise Executive Summary.
- Page 2 is primarily COER-focused.
- Page 3 is primarily G&A-focused.

Different visuals may also use different:

- Workforce populations
- Reporting periods
- Current-state versus historical logic
- Rolling versus selected-period logic
- Employee counts versus requisition or position counts

Check the metric definition and slicer state before comparing results.

What does Workforce Group mean?

Workforce Group allows applicable analysis to be filtered to:

- COER
- G&A
- All

COER is the current working grouping primarily associated with field and revenue-generating operations.

G&A refers to General & Administrative corporate and support functions.

Why is Workforce Group available on all three pages?

The slicer provides leadership with additional exploratory capability.

However:

- Page 2 remains designed primarily for COER retention analysis.
- Page 3 remains designed primarily for G&A workforce planning.

What is the difference between Active Employees and Current Workforce?

Active Employees include employees currently classified as Active.

Current Workforce may include:

- Active
- LOA

when the business question concerns the broader currently employed population.

Why are employees on LOA included in some calculations?

Employees on LOA remain employed even though they are temporarily unavailable.

Metrics describing workforce maturity, tenure, team experience, or broader current workforce may therefore include Active + LOA.

How is Turnover Rate calculated?

Total Separations ÷ Average Monthly Workforce Headcount

Average Monthly Headcount uses workforce snapshots throughout the selected period.

Why did the turnover methodology use monthly workforce snapshots?

An earlier approach relied primarily on beginning and ending workforce headcount.

That approach could underrepresent workforce exposure when significant hiring and separation activity occurred during the period.

Monthly workforce snapshots provide a more representative denominator.

Why can Turnover Rate be more than 100%?

A workforce group can experience more separations during a period than its average workforce size.

This can occur when employees leave and are replaced multiple times.

Turnover above 100% does not automatically indicate a calculation problem.

What is the Turnover Impact Index?

The Turnover Impact Index combines:

- Turnover Rate — 50%
- Separation Share — 30%

- Separation Volume — 20%

It helps identify organizational areas with the greatest combined retention impact.

Is the Turnover Impact Index a percentage?

No.

It is a relative **0–100 prioritization score**.

A score of 100 means the entity has the highest combined normalized retention impact within the applicable peer comparison group.

It does not mean 100% turnover or maximum organizational risk.

Why can the Impact Index change when I change filters?

The Index is calculated relative to the current peer group.

Changing the reporting period, Office, Division, Workforce Group, or Supervisor can change the comparison population and therefore the relative score.

Why aren't we using Turnover Rate alone to identify the highest-impact group?

Very small groups can produce extremely high Turnover Rates from only a few separations.

The Impact Index adds Separation Volume and Separation Share so leadership can consider broader organizational effect.

Why are the 30-, 60-, 90-, and 180-day attrition rates different?

Each metric measures whether an eligible hire separated by a specific employment milestone.

Together, they show how early workforce loss accumulates across the first six months.

Why isn't every hire included in the 180-Day Attrition Rate?

An employee must have had enough time to reach 180 days before being included in the eligible population.

A recently hired employee cannot yet be evaluated for 180-day retention.

What is the difference between Early Attrition Rate and Separations by Tenure Band?

Early Attrition Rate asks:

What percentage of eligible hires leave by each milestone?

Separations by Tenure Band asks:

At what tenure stage are actual employee separation events occurring?

What is Separation Type?

Separation Type is a source-defined classification of employee separation activity.

Current categories may include:

- Voluntary
- Involuntary
- Never Started

The field provides broad workforce-loss context.

It does not necessarily provide a detailed cause of separation.

What does Hired, Never Started mean?

The current dashboard working definition identifies employees whose:

Hire Date = Separation Date

These records are displayed as supporting Separation Detail.

Is Hired, Never Started the same as the Separation Type Never Started?

Not necessarily.

Hired, Never Started uses a dashboard date rule.

Never Started under Separation Type is a source-defined classification.

They should only be treated as equivalent if HR formally confirms that the definitions align.

What is the difference between Open Positions and Open Requisitions?

Open Positions represents requested unfilled seats.

Open Requisitions counts distinct recruiting requisitions.

One requisition may request more than one position.

The two metrics should therefore not be expected to match.

How is Average Time to Hire calculated?

Version 2.0 uses:

Potential Start Date − Offer Accepted Date

The result represents the average number of days between candidate acceptance and planned start.

Why doesn't Time to Hire start when the requisition was opened?

HR finalized the Version 2.0 definition as the period between:

- Offer Accepted Date
- Potential Start Date

Requisition Open Date is therefore not part of the current Time to Hire KPI.

How is Offer Acceptance Rate calculated?

Offers Accepted ÷ Offers Extended

The denominator includes applicants whose Offer Letter Sent date falls within the selected reporting period.

Accepted offers must belong to that offer cohort and be accepted by the effective reporting end date.

What does Estimated COER Employee Replacement Cost represent?

The metric estimates the financial impact of applicable COER separation activity using the current HR planning assumption of:

$5,400 per applicable separation

Is the $5,400 replacement cost an actual expense?

No.

It is a workforce-planning estimate.

It is not:

- An accounting expense
- An exact cost for every employee
- A salary-based replacement calculation
- A universal industry benchmark

Why might Estimated Replacement Cost not equal enterprise separations × $5,400?

The estimate is designed for the applicable COER/field-operations replacement-cost population.

Enterprise separation totals may include employees outside that population.

Why might Open Positions remain high even when hiring is strong?

Strong hiring and high open demand can occur at the same time.

Possible reasons include:

- Organizational growth
- Replacement hiring
- Multiple positions per requisition
- New hiring requests
- Openings being created faster than positions are filled

Does a high Average Team Size mean supervisors are overloaded?

Not necessarily.

Team size should be interpreted with:

- Work complexity
- Employee experience
- Geography
- Organizational structure
- Supervisor responsibilities

The dashboard identifies a workforce-planning question, not an automatic conclusion.

Does low Workforce Experience by Supervisor mean poor supervisor performance?

No.

Lower average team tenure may reflect:

- Recent hiring
- Organizational growth
- Workforce turnover
- New team formation
- Business changes

The visual describes team experience.

It does not evaluate supervisor performance.

Why might older historical results be incomplete?

VCI currently uses SAP.

Prior workforce records were maintained in UKG beginning approximately in 2018, while earlier records were primarily paper-based.

Historical migration remains ongoing.

Older dashboard periods therefore reflect the historical records currently available.

Can current dashboard results still be trusted if older historical data is incomplete?

Current and live workforce reporting uses operational files consistently maintained and updated by HR.

Current metrics have also undergone validation.

Historical completeness and current reporting reliability should therefore be treated separately.

Why might Power BI differ slightly from an HR presentation or another report?

Differences may result from:

- Reporting-date timing
- Refresh timing
- Source-file timing
- Filter state
- Workforce Group selection
- Population definitions
- Methodology

Before assuming there is a data issue, confirm that both reports use the same reporting context.

What should I do if dashboard numbers look unusual?

Before assuming there is a data issue:

1. Check the Last Refresh.
2. Review the selected Trend Analysis Period.
3. Check Workforce Group.
4. Check Office and Division.
5. Check Supervisor or Employment Status where applicable.
6. Use Clear All Slicers if needed.
7. Confirm the metric's population and reporting-period definition.
8. Review detailed records where available.
9. Confirm source-report timing.

10. Request validation if the result remains unexplained.

Support and Feedback

During the Version 2.0 working-baseline period, users are encouraged to document:

- Questions about metric definitions
- Workforce Group classification questions
- Targets that appear too strict or too lenient
- Unexpected results
- Retention patterns requiring additional explanation
- Talent Acquisition questions
- Replacement-cost questions
- Workforce-planning questions
- Missing fields
- Data-quality concerns
- Historical-data concerns
- Suggested dashboard improvements
- Additional FAQ questions that would benefit future users

Feedback will help HR Analytics & Reporting establish stronger organizational baselines, improve interpretation guidance, and enhance future dashboard versions.

Quick Page Summary

Page 1 — Executive HR Dashboard

Primary Purpose: Enterprise workforce summary

Use it to answer:

How is the workforce performing overall?

Focus on:

- Current workforce
- Movement

- Turnover
- Talent Acquisition
- Replacement cost
- Workforce distribution
- Executive alerts

Page 2 — COER Workforce Analysis

Primary Purpose: Retention and workforce-loss analysis

Use it to answer:

Where, when, and how is workforce loss occurring?

Focus on:

- Turnover
- Separations
- Early attrition
- Retention concentration
- Impact Index
- Separation Type
- Hired, Never Started
- Employee-level separation detail

Page 3 — G&A Workforce Analysis

Primary Purpose: Workforce capacity and planning

Use it to answer:

How is the G&A workforce structured, experienced, available, and positioned to support organizational needs?

Focus on:

- Workforce composition
- Workforce growth
- Hiring vs separations
- Team size

- Tenure
- LOA
- Workforce experience
- Supervisor structure
