VCI Executive HR Dashboard

User Guide, Metric Definitions & Interpretation Manual

Version 2.0 — Major Workforce Reporting Framework Redesign / Working Baseline
Internal Use Only

Document Control

Field	Details
Document Title	VCI Executive HR Dashboard – User Guide, Metric Definitions & Interpretation Manual
Document Owner	Human Resources
Dashboard Owner	HR Analytics & Reporting
Current Version	Version 2.0
Document Status	Major Workforce Reporting Framework Redesign / Working Baseline
Effective Date	August 2026

Field	Details
Last Updated	August 2026
Review Frequency	Monthly during initial v2.0 rollout; Quarterly after stabilization
Intended Audience	HR Leadership, HR Team Members, Executives, Operational Leaders, and Authorized Dashboard Users
Related Dashboard Pages	Executive HR Dashboard, COER Workforce Analysis, G&A Workforce Analysis
Source of Record	Power BI HR Dashboard and approved workforce, Talent Acquisition, and HR operational source systems
Approval Status	Pending Executive Approval
Confidentiality	Internal Use Only

Versioning Convention

This document follows semantic versioning to clearly distinguish between major dashboard changes and routine documentation updates.

Version	Description
1.0	Initial dashboard release
1.1	Workforce intelligence enhancement including expanded executive workforce metrics, workforce availability analysis, retention and turnover analytics, early-tenure attrition, executive retention insights, and additional data-quality monitoring
2.0	Major workforce reporting framework redesign introducing enterprise, COER, and G&A analytical views; Workforce Group filtering; Talent Acquisition metrics and source integration; COER replacement-cost analysis; redesigned executive alerts; expanded separation analysis; and revised workforce-planning analysis

Increase the **Major Version** whenever:

- A major dashboard redesign occurs.
- A core KPI methodology materially changes in a way that affects historical comparability.
- Composite-score methodology materially changes.
- Metric weighting materially changes.
- A primary data source is replaced.
- Material data-model restructuring occurs.
- Target methodology fundamentally changes.
- Executive reporting structure fundamentally changes.
- Historical comparability is materially affected.

Increase the **Minor Version** whenever:

- New functionality extends the existing reporting framework without materially breaking historical comparability.
- An additive analytical page is introduced.
- New metrics or visuals are added using approved methodologies.

- Definitions are clarified.
- User guidance is expanded.
- Targets are adjusted.
- Visual names or placements change.
- Additional validated source fields are introduced.
- Usability enhancements are implemented.
- Documentation is improved.

Revision History

Version	Date	Summary	Author	Approved By
1.0	August 2026	Initial release of the Executive HR Dashboard User Guide covering the Executive HR Dashboard and Workforce Operations pages.	BI Team	Pending
1.1	August 2026	Expanded workforce intelligence based on HR leadership requirements. Enhancements included new executive workforce-movement KPIs; state-level workforce and LOA analysis; a dedicated Retention & Turnover page; average-monthly-headcount turnover methodology; early-tenure attrition; Turnover Impact Index; dynamic Executive Retention Insights; expanded workforce exceptions; enhanced date filtering; additional monthly trend analysis; and Clear All Slicers.	BI Team	Pending

Version	Date	Summary	Author	Approved By
2.0	August 2026	Major redesign of the Executive HR Dashboard based on updated HR leadership reporting requirements. Version 2.0 restructures the dashboard into an enterprise Executive Summary, a COER-focused workforce retention and separation analysis, and a G&A-focused workforce planning analysis. Enhancements include Workforce Group filtering; new recruiting and Talent Acquisition source integration; Open Positions, Open Requisitions, Average Time to Hire, and Offer Acceptance Rate; Estimated COER Employee Replacement Cost and cost assumptions; redesigned Executive Workforce Alerts; Separation Type analysis; Hired, Never Started analysis; revised retention-impact calculations; and expanded workforce capacity, tenure, supervisor, and planning analysis.	BI Team	Pending

---

Introduction

Welcome to the **VCI Executive HR Dashboard**.

The dashboard provides leadership with a centralized, data-driven view of workforce health, workforce movement, Talent Acquisition, retention, workforce capacity, organizational structure, and workforce patterns requiring additional review.

Version 2.0 introduces a redesigned workforce-intelligence framework that separates enterprise-level executive reporting from two primary workforce perspectives:

- **COER Workforce Analysis** — focused primarily on field and revenue-generating workforce retention, turnover, separations, early-tenure attrition, and workforce-loss patterns.

- **G&A Workforce Analysis** — focused primarily on corporate and support workforce capacity, organizational structure, workforce experience, availability, supervisor span, and workforce planning.

The **Executive HR Dashboard** remains the organization-wide starting point and provides leadership with a consolidated view across workforce movement, current operating conditions, Talent Acquisition, workforce distribution, estimated COER employee replacement cost, and executive workforce alerts.

Historically, workforce reporting has relied on individual operational reports, spreadsheets, presentations, and manual analysis. The dashboard brings approved workforce and Talent Acquisition data sources together into a centralized reporting environment to support faster, more consistent, and more informed workforce decision-making.

Rather than simply displaying numbers, the dashboard is intended to answer meaningful business questions such as:

- How is the workforce changing over time?
- Are new hires keeping pace with employee separations?
- How effectively are hiring needs converting into accepted offers and planned starts?
- Where are retention and turnover pressures concentrated?
- How quickly are newer employees separating?
- Which workforce segments have the greatest relative retention impact?
- What types of separations are contributing to workforce loss?
- What is the estimated replacement-cost impact of COER employee separations?
- How is G&A workforce capacity distributed across divisions, offices, and supervisor teams?
- Where are workforce experience and institutional knowledge concentrated?
- Which workforce conditions require leadership attention?

The dashboard identifies patterns and areas for investigation. It is intended to support leadership discussion and HR decision-making, not replace professional judgment or establish cause without additional operational context.

Data Availability and Historical Reporting Context

All calculations presented in the VCI Executive HR Dashboard are based on workforce data currently available within approved source systems and reporting files.

VCI's workforce information has transitioned across multiple systems and recordkeeping processes over time.

The organization currently uses SAP.

Prior to SAP, workforce records were maintained in UKG beginning approximately in 2018.

Earlier historical workforce information was primarily maintained through paper-based processes.

Historical data transfer, migration, and consolidation remain ongoing.

As a result, the available historical dataset should not be interpreted as a complete representation of VCI's entire workforce history.

This limitation is particularly important when reviewing:

- Historical workforce headcount
- Historical hires
- Historical separations
- Historical turnover
- Long-term workforce trends
- Year-over-year comparisons
- Tenure at separation
- Early-tenure attrition
- Other analyses extending into earlier reporting periods

The absence of a historical record from the dashboard does not necessarily mean the workforce event did not occur.

It may indicate that the corresponding historical record has not yet been migrated or incorporated into the available analytical dataset.

Current and Live Reporting Confidence

Historical-data limitations should be distinguished from the reliability of current and live workforce reporting.

Current workforce metrics are derived from the operational workforce files consistently maintained and updated by the Human Resources department, including applicable Smartsheet-based workforce and Talent Acquisition sources used in HR's reporting processes.

Current and live workforce metrics have also undergone dashboard validation and reconciliation.

Accordingly:

Current and live workforce metrics can be used with confidence within the documented metric definitions and dashboard refresh timing, while older historical analyses should be interpreted within the limitations of available migrated records.

As additional historical records are migrated, historical analysis may become more complete.

This does not necessarily indicate that prior dashboard calculations were incorrect. It reflects changes in the completeness of the underlying historical dataset.

Purpose of this Guide

This guide is intended to help users:

- Understand what every dashboard metric represents.
- Understand the business question each visual is designed to answer.
- Interpret dashboard results consistently.
- Understand the distinction between enterprise, COER, and G&A workforce analysis.
- Understand how Workforce Group, Trend Analysis Period, Office, Division, Supervisor, and other applicable filters affect results.
- Interpret Talent Acquisition metrics and recruiting-demand measures.
- Understand turnover, early-tenure attrition, and Turnover Impact Index methodology.
- Understand the assumptions behind Estimated COER Employee Replacement Cost.
- Interpret workforce capacity, tenure, availability, and supervisor-team analysis.
- Understand how targets and working baselines are used.
- Identify when HR, operational, or leadership follow-up may be appropriate.
- Understand historical-data limitations.
- Distinguish current-state reporting reliability from historical-data completeness.
- Support leadership discussions using a common set of definitions.
- Serve as the official reference for the Executive HR Dashboard.

This document should be reviewed whenever dashboard metrics, targets, calculations, source systems, workforce classifications, visual structures, or analytical methodologies are updated.

How to Use this Dashboard

The dashboard is organized into three complementary workforce-intelligence pages.

Executive HR Dashboard

Provides the enterprise-level executive summary of workforce health, movement, Talent Acquisition, workforce distribution, and leadership priorities.

Use this page to review:

- Total Active Employees
- New Hires — Last 30 Days
- Separations — Last 30 Days
- Employees on LOA
- Turnover Rate
- Separations YTD
- Workforce <1 Year
- Net Workforce Growth
- Open Positions
- Open Requisitions
- Average Time to Hire
- Offer Acceptance Rate
- Estimated COER Employee Replacement Cost
- Estimated Replacement Cost Assumptions
- Workforce Trend
- Workforce Status
- New Hires vs Separations
- Workforce Movement Trend
- Workforce distribution by Office
- Workforce distribution by Supervisor
- Workforce distribution by State
- Executive Workforce Alerts

The Executive HR Dashboard should generally be the starting point for leadership workforce review.

COER Workforce Analysis

Provides a dedicated retention and workforce-loss view focused primarily on the COER workforce.

Use this page to investigate:

- Current turnover
- Separations YTD
- 30-Day Attrition Rate
- 60-Day Attrition Rate

- 90-Day Attrition Rate
- 180-Day Attrition Rate
- Executive Retention Insights
- Turnover Impact Index
- Estimated COER Employee Replacement Cost
- Monthly turnover
- Monthly separations
- Separation Type
- Turnover concentration by Division
- Turnover concentration by Office
- Turnover by Supervisor
- Turnover by Job Title
- Separations by tenure band
- Hired, Never Started employees
- Employee-level separation detail

The COER Workforce Analysis page is designed to move from:

What is happening? → How is it changing? → Where is workforce loss concentrated? → When are employees leaving? → Which workforce segments warrant investigation? → Which employee records are contributing to the pattern?

G&A Workforce Analysis

Provides a workforce-planning and organizational-capacity view focused primarily on G&A corporate and support functions.

Use this page to investigate:

- Total Active Employees
- Recent hiring
- Recent separations
- Employees on LOA
- Net Workforce Growth
- Average Team Size
- Workforce composition by Division
- Workforce composition by Office
- Workforce composition by Supervisor
- Quarterly workforce growth
- Hiring vs Separations
- Workforce Tenure Distribution
- Supervisor Direct Reports
- Average Workforce Tenure by Division
- Workforce LOA by State

- Workforce Experience by Supervisor

The G&A Workforce Analysis page is designed to help leadership understand how workforce capacity, organizational structure, employee experience, availability, and management span are positioned to support organizational needs.

Dashboard Philosophy

The Executive HR Dashboard is designed around one guiding principle:

Every metric should help answer a meaningful business question.

Rather than displaying data for the sake of reporting, each visual is intended to support a decision, identify an opportunity, or highlight an area requiring further review.

When reviewing the dashboard, consider asking:

- What changed?
- Why might it have changed?
- Does this require action, monitoring, or additional context?
- Is this expected?
- Is the pattern concentrated in a particular workforce group, office, division, supervisor team, or job role?
- What additional information should be reviewed before making a decision?

The dashboard is intended to support conversations — not replace professional judgment.

Version 2.0 Workforce Reporting Framework

Version 2.0 introduces a three-page analytical framework.

Page	Primary Lens	Primary Workforce Focus
Executive HR Dashboard	Enterprise executive summary	Organization-wide workforce, with Workforce Group exploration available
COER Workforce Analysis	Retention and separation diagnostics	Primarily field and revenue-generating workforce
G&A Workforce Analysis	Capacity, structure, experience, and workforce planning	Corporate and support functions

Workforce Group

Version 2.0 introduces a shared **Workforce Group** classification.

COER represents the configured workforce grouping used primarily for field and revenue-generating operations.

G&A represents General & Administrative employees and is used primarily for corporate and support functions.

All represents the combined enterprise workforce where the Workforce Group filter is not limited to one category.

Workforce Group is intended to improve consistency across workforce and Talent Acquisition reporting.

The configured membership of each group remains subject to HR review as organizational classifications are finalized.

Although Workforce Group can be used for exploratory analysis across the dashboard:

- **Page 2 is designed primarily as the COER analytical view.**
- **Page 3 is designed primarily as the G&A analytical view.**

Understanding Dashboard Targets

The targets displayed throughout the dashboard represent **working operational benchmarks**, not permanent organizational standards.

Because VCI's centralized workforce analytics framework is still being established, current targets should be viewed as starting points.

As HR and leadership review additional monthly and quarterly results, they should evaluate whether existing thresholds appropriately represent normal business operations.

Version 2.0 also includes multiple measures for which formal targets have not been established.

These include:

- Turnover Rate
- Workforce <1 Year
- Separations YTD
- Open Positions
- Open Requisitions
- Average Time to Hire
- Offer Acceptance Rate
- Estimated COER Employee Replacement Cost
- 30-Day Attrition Rate
- 60-Day Attrition Rate
- 90-Day Attrition Rate
- 180-Day Attrition Rate
- LOA Rate
- Turnover Impact Index

The Turnover Impact Index is a comparative prioritization score and therefore does not require a traditional performance target.

Estimated Replacement Cost is a planning estimate rather than an accounting expense or performance target.

During the Working-Baseline Period

Users should:

1. Review dashboard results regularly.
2. Compare multiple monthly and quarterly periods.
3. Identify recurring workforce patterns.
4. Establish realistic operating ranges.
5. Discuss whether current benchmarks produce useful management signals.
6. Adjust targets when supported by organizational experience.
7. Document approved changes.
8. Update the dashboard and reference guide together.

Changing a target does not mean prior dashboard reporting was incorrect.

It reflects improved understanding of the organization's operating environment.

Best Practices for Using the Dashboard

Look for trends rather than isolated numbers

One result rarely tells the full story.

Focus on sustained movements, repeated patterns, and material changes across comparable periods.

Compare related metrics together

Review Turnover Rate together with:

- Separation Volume
- Average Monthly Workforce Headcount
- Net Workforce Growth
- New Hires
- Early-Tenure Attrition
- Separation Tenure Bands
- Turnover Impact Index

Review Talent Acquisition together with:

- Open Positions
- Open Requisitions
- Average Time to Hire
- Offer Acceptance Rate
- Workforce growth
- Recent hiring
- Workforce loss

Review workforce structure together with:

- Workforce by Division
- Workforce by Office
- Workforce by Supervisor
- Average Team Size
- Workforce Tenure
- LOA
- Workforce Experience

Use detailed pages to investigate

Page 1 identifies enterprise-level workforce conditions.

Page 2 provides deeper COER retention and workforce-loss analysis.

Page 3 provides deeper G&A workforce-capacity and planning analysis.

Use the dashboard as a conversation starter

Dashboard results should not be used as the sole basis for evaluating:

- Employees
- Supervisors
- Offices
- Divisions
- Job roles
- Workforce groups
- Organizational performance

The dashboard identifies patterns.

Additional business context is required before determining cause or action.

Consider historical-data availability

Older reporting periods may have less complete source coverage because historical migration remains ongoing.

Current and live reporting has stronger source coverage and has undergone more direct validation.

Always confirm filters and refresh timing

Before comparing Power BI with another report:

- Check the Last Refresh.
- Check Trend Analysis Period.
- Check Office.
- Check Division.
- Check Workforce Group.
- Check Supervisor where applicable.
- Check Employment Status where applicable.
- Use Clear All Slicers when necessary.

Page 1 — Executive HR Dashboard

Page Purpose

The Executive HR Dashboard provides an enterprise-level summary of workforce conditions, workforce movement, Talent Acquisition, workforce distribution, financial turnover impact, and leadership alerts.

The page is organized around the overarching question:

Enterprise Workforce Intelligence — How is the workforce performing across growth, stability, talent acquisition, and operational capacity?

Use this page as the starting point for executive and HR workforce review.

Page 1 Dashboard Filters

Trend Analysis Period

What This Filter Does

Controls the reporting period used by applicable historical and period-based measures.

The selected reporting period affects metrics such as:

- Turnover Rate
- Separations YTD or selected-period separation analysis
- Net Workforce Growth
- Workforce Trend
- New Hires vs Separations
- Workforce Movement Trend
- Applicable Talent Acquisition measures
- Estimated Replacement Cost

Some current-state and rolling measures intentionally do not follow the historical period in the same way.

Examples include:

- Total Active Employees
- Employees on LOA
- New Hires — Last 30 Days
- Separations — Last 30 Days

These represent either the current workforce or a rolling period anchored to the current date.

Office

Limits applicable dashboard results to the selected reporting office.

Use this filter to review workforce movement, staffing concentration, turnover, and other supported metrics within a specific office.

Division

Limits applicable results to the selected Division.

Use this filter to investigate a particular business area.

Workforce Group

Limits applicable results to:

- COER
- G&A
- All

The Executive Summary defaults to the enterprise view unless a workforce group is selected.

Last Refresh

Displays the most recent date and time the dashboard data was refreshed.

Always review this timestamp before comparing results with another report or presentation.

Clear All Slicers

Returns the page to its default analytical state.

Use it when:

- Beginning a new review
- Returning to enterprise results
- Comparing Power BI with another report
- A number appears unexpectedly high or low
- You are unsure whether a prior filter remains active

Section 1 — Operational Metrics

Business / Operational Question

What is the current operational state of the workforce?

This section provides a current snapshot of active workforce size, recent hiring, recent workforce loss, and temporary workforce unavailability.

👥 Total Active Employees

What This Metric Represents

The current number of employees whose authoritative Workforce Status is **Active**.

Employees currently classified as LOA or Separated are not included.

How This Metric Is Calculated

For the current reporting state:

1. Identify employees whose authoritative Workforce Status is Active.
2. Exclude blank employee identifiers.
3. Count each represented employee once.

For historical as-of analysis where applicable, Active status can be reconstructed using employment and LOA dates.

Why This Matters

This is the primary baseline for the currently working employee population.

It provides context for:

- Recent hiring
- Recent separations
- Workforce distribution
- Team size
- Workforce growth
- Workforce planning

Trend Indicator

The trend compares the current active workforce with the estimated active workforce approximately 30 days earlier.

▲ Increase
The active workforce is larger.

▼ Decrease
The active workforce is smaller.

— No Change
The active workforce is approximately unchanged.

How to Interpret It

An increase is not automatically favorable.

A decrease is not automatically unfavorable.

Review changes alongside hiring, separations, business demand, project staffing needs, and workforce-group context.

➕👤 New Hires — Last 30 Days

What This Metric Represents

The number of employees hired during the latest rolling 30-day period.

Reporting Window

Today − 30 Days < Hire Date ≤ Today

Why This Matters

Recent hiring may reflect:

- Workforce expansion
- Replacement hiring
- Project demand
- Seasonal staffing
- Increased onboarding workload
- Recruiting activity

Trend Indicator

The latest 30-day period is compared with the immediately preceding 30-day period.

An increase means more employees were hired than in the prior rolling period.

A decrease means hiring activity slowed.

Important Note

This metric is intentionally anchored to the current date and is not designed as a selected-period historical measure.

🚪 Separations — Last 30 Days

What This Metric Represents

The number of employee separations occurring during the latest rolling 30-day period.

Reporting Window

Today − 30 Days < Separation Date ≤ Today

Why This Matters

Recent separations provide visibility into:

- Workforce attrition
- Staffing loss
- Knowledge loss
- Replacement-hiring demand
- Emerging retention concerns

Trend Indicator

The latest 30-day period is compared with the immediately preceding 30-day period.

An increase means separation activity increased.

A decrease means fewer employees separated.

How to Interpret It

Review increases alongside:

- New Hires
- Turnover Rate
- Division
- Office
- Supervisor
- Job Title
- Tenure at Separation
- Early-Tenure Attrition

🏥 Employees on LOA

What This Metric Represents

The current number of employees whose authoritative Workforce Status is **LOA**.

These employees remain employed but are temporarily unavailable for regular work.

Why This Matters

LOA may affect:

- Workforce capacity
- Staffing coverage
- Scheduling
- Supervisor workload
- Resource planning
- Operational continuity

Current Target

10 employees

Interpretation

Above target means the current LOA population exceeds the working planning benchmark.

Below target means the current LOA population is below the benchmark.

Important Note

LOA is a workforce-capacity condition.

It should not be interpreted as an employee-performance measure.

The target of 10 remains a working benchmark and may be adjusted by HR.

Section 2 — Workforce Movement & Stability

Business / Operational Question

Is the workforce growing sustainably, and where are stability pressures emerging?

This section provides leadership with a concise view of workforce loss, turnover, workforce maturity, and net movement.

🔄 Turnover Rate

What This Metric Represents

Turnover Rate measures employee separations relative to the average workforce population exposed to separation during the selected measurement period.

Approved Calculation

Turnover Rate = Total Separations During the Measurement Period ÷ Average Monthly Workforce Headcount During the Same Period

Average Monthly Workforce Headcount

Average Monthly Workforce Headcount is calculated using workforce snapshots across the selected period.

For each applicable month-end:

1. Identify employees hired on or before the snapshot date.
2. Exclude employees who separated on or before the snapshot date.
3. Include employees on LOA because LOA employees remain employed.
4. Count the represented employed workforce.
5. Average the monthly snapshot populations.

This methodology is more representative than averaging only beginning and ending headcount.

Why This Matters

Turnover standardizes workforce loss relative to workforce size.

Review Turnover Rate together with:

- Separation Volume
- Average Monthly Headcount
- New Hires
- Net Workforce Growth
- Early-Tenure Attrition

- Separation Tenure Bands
- Turnover Impact Index

Trend Indicator

Turnover comparisons are expressed in **percentage points**, not ordinary percent change, where applicable.

Important Note — Turnover Above 100%

Turnover may legitimately exceed 100% for:

- Small teams
- Small job-title populations
- Rapidly changing organizational groups
- Groups experiencing repeated employee replacement

A rate over 100% does not automatically indicate a calculation error.

👋 Separations YTD

What This Metric Represents

The number of employee separations occurring from the beginning of the current calendar year through the applicable reporting date.

Why This Matters

Separations YTD provides leadership with a cumulative measure of workforce exits.

Review it together with:

- Turnover Rate
- Prior-year separations
- New Hires
- Net Workforce Growth
- Early-Tenure Attrition

Trend Indicator

The trend compares current YTD separation volume with the comparable prior-year YTD period.

🌱 Workforce <1 Year

What This Metric Represents

The percentage of the current employed workforce with less than one year of tenure.

The applicable current workforce includes:

- Active
- LOA

Separated employees are excluded.

Tenure Rule

Effective Hire Date uses Seniority Date when available and Hire Date otherwise.

Why This Matters

This metric provides visibility into workforce maturity and early-tenure exposure.

A larger Under-1-Year population may indicate:

- Recent growth
- Increased hiring
- Increased onboarding demand
- Training demand
- Greater early-retention exposure

Important Note

A high percentage is not automatically unfavorable.

For a growing organization, a younger workforce may be expected.

📈 Net Workforce Growth

What This Metric Represents

The difference between employee hiring and employee separations within the applicable reporting context.

Calculation

Net Workforce Growth = New Hires − Separations

Interpretation

Positive value
More hires than separations.

Negative value
More separations than hires.

Zero
Hiring and separations are equal.

Why This Matters

Net growth helps distinguish true expansion from replacement hiring.

Section 3 — Talent Acquisition

Business / Operational Question

How effectively are hiring needs converting into accepted offers and planned starts?

Version 2.0 introduces an executive Talent Acquisition section combining hiring demand, requisition volume, recruiting speed, and offer conversion.

🪑 Open Positions

What This Metric Represents

The number of requested positions that remain unfilled as of the applicable reporting date.

How This Metric Is Calculated

For each applicable position request:

1. Date Requested must be populated.
2. Date Requested must be on or before the as-of date.
3. Date Position Filled must either be blank or later than the as-of date.
4. Sum the number of positions requested.

For current/future end-date selections, the measure reflects the current open-position state.

For historical end dates, the metric reconstructs open demand as of that selected date.

Why This Matters

Open Positions provides visibility into outstanding hiring demand and potential workforce-capacity needs.

Important Source Limitation

If one request contains several required positions but the source does not separately record how many of those positions have been filled, partial filling cannot be perfectly reconstructed.

The metric therefore follows the position-request information available in the source.

Target

No formal performance target has been established.

📋 Open Requisitions

What This Metric Represents

The number of distinct recruiting requisitions that remain open as of the applicable reporting date.

How This Metric Is Calculated

A requisition is considered open when:

- Req Number is populated.
- Date Requested is on or before the as-of date.
- Date Position Filled is blank or later than the as-of date.

Distinct Req Numbers are counted.

Why This Matters

Open Requisitions shows the volume of active recruiting demand requiring Talent Acquisition attention.

Important Difference from Open Positions

One requisition may represent more than one requested position.

Therefore:

Open Positions and Open Requisitions should not be expected to have the same value.

Target

No formal target has been established.

⏱️ Average Time to Hire

What This Metric Represents

The average number of days between **Offer Accepted Date** and **Potential Start Date** for applicable accepted offers.

Calculation

For each applicable applicant:

Time to Hire = Potential Start Date − Offer Accepted Date

The dashboard then averages the valid applicant-level durations.

Population Rules

Records require:

- Applicant identifier
- Offer Accepted Date
- Potential Start Date
- Potential Start Date on or after Offer Accepted Date

Applicants are evaluated based on accepted offers within the selected reporting period.

Why This Matters

Average Time to Hire provides a planning view of the time between candidate commitment and planned workforce entry.

It can help identify:

- Longer pre-start processes
- Candidate processing delays
- Operational onboarding timing
- Workforce-demand fulfillment speed

Trend Indicator

The current selected period is compared with the equivalent prior-year period.

Lower is generally favorable, provided quality and compliance requirements are maintained.

Target

No formal target has been established.

🤝 Offer Acceptance Rate

What This Metric Represents

The percentage of offers extended during the applicable offer cohort that are accepted by the effective reporting end date.

Calculation

Offer Acceptance Rate = Offers Accepted ÷ Offers Extended

Offers Extended

An applicant is included when Offer Letter Sent falls within the selected reporting period.

Offers Accepted

An applicant is included in the accepted count when:

- The offer belongs to the selected offer cohort.

- Offer Accepted Date is populated.
- Offer Accepted Date is on or after Offer Letter Sent.
- Offer Accepted Date occurs by the effective selected end date.

Why This Matters

Offer Acceptance Rate helps leadership understand candidate conversion after an offer is made.

A declining rate may warrant review of:

- Offer competitiveness
- Candidate expectations
- Recruiting process
- Hiring timing
- Role fit
- Candidate experience

Trend Indicator

Trend is expressed as a **percentage-point difference** from the equivalent prior-year period.

Target

No formal performance target has been established.

Section 4 — Estimated COER Employee Replacement Cost

Business / Operational Question

What is the estimated financial impact of COER employee separations during the selected period?

What This Metric Represents

Estimated COER Employee Replacement Cost converts applicable COER employee separations into an estimated financial turnover-impact amount.

Current Planning Assumption

$5,400 per applicable COER employee separation

Calculation

Estimated COER Employee Replacement Cost = Applicable COER Separations × $5,400

Why This Matters

Separation counts alone do not show the potential business cost associated with replacing lost employees.

The estimate provides leadership with a financial planning lens for workforce turnover.

Trend Indicator

The current selected-period estimate is compared with the equivalent prior-year replacement-cost estimate.

Higher cost generally reflects higher applicable separation volume.

Lower cost generally reflects lower applicable separation volume.

Important Note

This is a **planning estimate**.

It is not:

- An actual general-ledger expense
- A payroll calculation
- A role-specific salary replacement calculation
- A universal industry-standard replacement amount
- A formal financial forecast

The current $5,400 assumption is based on VCI HR leadership's working estimate for a lost field operations employee.

The population and assumption should be revisited if HR changes the definition of the applicable COER workforce or replacement-cost methodology.

Section 5 — Estimated Replacement Cost Assumptions

Business / Operational Question

What cost assumptions are used to estimate the replacement impact of a COER employee separation?

Cost Component	Estimated Cost	Description
Separation / Admin Cost	$200	Administrative processing and separation handling
Recruiting & Advertising	$150	Job posting, recruiting promotion, and sourcing costs
Recruiter / HR Labor	$200	Recruiter and HR staff time spent replacing the employee
Background / Drug / Driving / Certification Costs	$250	Pre-employment checks and compliance screening
Onboarding Cost	$150	Initial onboarding and setup activities
Training Cost	$550	Job training and onboarding support
Uniform / Equipment / Vehicle / Technology Setup	$700	Operational setup required for the replacement employee

Cost Component	Estimated Cost	Description
Overtime / Temporary Coverage Cost	$1,000	Coverage costs while the role is vacant
Ramp-Up Productivity Loss	$2,200	Lost productivity while the replacement gets up to speed
Total Estimated Replacement Cost per COER Employee	**$5,400**	**Total working planning estimate per applicable field operations employee separation**

The assumption should be reviewed whenever HR materially changes the underlying cost framework.

Section 6 — Workforce Trend

Business / Operational Question

How is VCI's total workforce changing over time?

What This Visual Shows

Historical workforce headcount across the selected Trend Analysis Period.

Historical Workforce Logic

For each represented historical date:

1. Include employees hired on or before the date.
2. Exclude employees whose Separation Date is on or before the date.
3. Include LOA employees because they remain employed.
4. Use current authoritative status logic for the current reporting point where appropriate.

Why This Matters

The visual helps identify:

- Long-term growth
- Workforce contraction
- Seasonal fluctuations
- Sudden staffing changes
- Differences between recent and prior workforce levels

Historical Data Note

Older trends should be interpreted within the limitations of migrated workforce history.

Recent periods have stronger source coverage.

Section 7 — Workforce Status

Business / Operational Question

How is the current workforce distributed across active, LOA, and separated status?

What This Visual Shows

The represented workforce grouped by authoritative Workforce Status.

Current categories include:

- Active
- LOA
- Separated

Why This Matters

The visual provides a simple view of workforce composition and helps distinguish:

- Currently working employees
- Temporarily unavailable employees
- Workforce loss represented in the applicable context

Section 8 — New Hires vs Separations

Business / Operational Question

Are new hires keeping pace with workforce losses across VCI?

What This Visual Shows

New Hires and Separations by Month Year.

How to Interpret It

Hires above separations
Positive workforce movement.

Separations above hires
Potential workforce contraction unless offset elsewhere.

Similar values
Hiring may primarily be replacing workforce loss.

Why This Matters

This visual distinguishes hiring activity from actual net workforce expansion.

Section 9 — Workforce Movement Trend

Business / Operational Question

How are hiring and turnover shaping enterprise workforce growth over time?

What This Visual Shows

A combined monthly analysis of:

- New Hires
- Turnover Rate

Why This Matters

Hiring volume alone does not indicate whether workforce growth is sustainable.

Examples:

High hiring + lower turnover
May indicate expansion.

High hiring + higher turnover
May indicate significant replacement hiring.

Low hiring + higher turnover
May indicate contraction risk.

Low hiring + lower turnover
May reflect a more stable workforce period.

Section 10 — Workforce Distribution by Office

Business / Operational Question

Where is VCI's workforce concentrated geographically?

What This Visual Shows

Current workforce count by reporting Office.

Why This Matters

Use the chart to understand:

- Largest operating locations
- Staffing concentration
- Geographic workforce dependencies
- Locations requiring greater HR or supervisor support

Section 11 — Workforce Distribution by Supervisor

Business / Operational Question

Where are the largest concentrations of employees across supervisor teams?

What This Visual Shows

Current employee count assigned to each Unified Supervisor.

Why This Matters

The chart can identify:

- Larger supervisor teams
- Smaller supervisor teams
- Areas of potential workload concentration
- Teams requiring additional span-of-control context

Important Note

Team size is not a supervisor-performance measure.

Review it alongside:

- Work complexity
- Geography
- Team tenure
- Division
- Office
- Supervisor responsibilities

Section 12 — Workforce Distribution by State

Business / Operational Question

How is VCI's workforce distributed between California and Nevada?

What This Visual Shows

Current workforce population by State.

Why This Matters

State-level analysis provides a consolidated geographic view without requiring manual aggregation of individual offices.

Use it with:

- Workforce availability
- Turnover
- Hiring activity
- Office concentration

Section 13 — Executive Workforce Alerts

Business / Operational Question

What enterprise workforce conditions require leadership attention right now?

What This Visual Shows

A dynamic list of workforce conditions meeting defined alert rules.

Only triggered alerts are displayed.

The current alert framework may include:

Talent Acquisition Capacity

May surface when recruiting demand remains open while Average Time to Hire is slower than the equivalent prior-year period.

The alert may display:

- Open Positions
- Open Requisitions

- Current Average Time to Hire
- Prior-year change

Turnover / Replacement Cost

May surface when Estimated COER Employee Replacement Cost is higher than the comparable prior-year period.

Offer Conversion

May surface when Offer Acceptance Rate is lower than the comparable prior-year period.

Capacity / LOA

Surfaces when Employees on LOA exceeds the current working target of 10.

Workforce Flow

May surface when recent separations exceed recent hiring.

Why This Matters

The alert section functions as an executive review queue.

It is intended to help leadership quickly identify which metrics warrant additional investigation.

Important Note

An alert does not establish cause.

Review the related KPI, chart, or detailed page before determining action.

Page 1 Working-Baseline Guidance

Page 1 contains a mixture of:

- Current-state metrics
- Rolling 30-day metrics
- Selected-period metrics
- Historical trends
- Working benchmarks

- Prior-year comparisons
- Planning estimates

Users should confirm the metric definition before assuming two Page 1 cards use the same reporting window.

Page 2 — COER Workforce Analysis

Page Purpose

The COER Workforce Analysis page provides a dedicated diagnostic view of workforce retention, turnover, separation activity, early-tenure attrition, and workforce-loss concentration.

The page is organized around the overarching question:

Where are retention risks, turnover pressures, and separation patterns emerging?

Page 2 is primarily designed for the COER workforce.

The current default Workforce Group is COER.

Use this page when deeper retention analysis is required after reviewing Page 1.

The analytical sequence moves from:

What is happening?

to:

How is it changing?

to:

Where is it concentrated?

to:

When are employees leaving?

to:

Which teams and roles warrant investigation?

to:

Which employee records are contributing to the pattern?

Page 2 Dashboard Filters

Current filters include:

- Trend Analysis Period
- Office
- Division
- Workforce Group
- Supervisor

Trend Analysis Period

Controls applicable turnover, separation, attrition, and selected-period analysis.

Office

Limits applicable retention analysis to the selected Office.

Division

Limits applicable retention analysis to the selected Division.

Workforce Group

Page 2 is designed primarily around COER.

The Workforce Group control can be used for exploratory analysis when appropriate.

Supervisor

Limits applicable results to the selected Unified Supervisor.

Clear All Slicers

Returns Page 2 to its default analytical state.

Section 1 — Retention Snapshot

Business / Operational Question

What is the current state of turnover and early-tenure attrition across the COER workforce?

The Retention Snapshot includes:

- Total Active Employees
- Turnover Rate
- Separations YTD
- 30-Day Attrition Rate
- 60-Day Attrition Rate
- 90-Day Attrition Rate
- 180-Day Attrition Rate

Total Active Employees

Uses the same authoritative Active workforce definition documented on Page 1, filtered to the applicable Page 2 population.

Turnover Rate

Uses the approved:

Total Separations ÷ Average Monthly Workforce Headcount

methodology.

Separations YTD

Shows cumulative separation activity from the beginning of the current calendar year through the applicable reporting date.

30-Day Attrition Rate

What This Metric Represents

The percentage of eligible hires who separate within their first 30 days.

Eligible Population

An employee must have had enough elapsed time to reach the 30-day milestone by the effective reporting end date.

60-Day Attrition Rate

The percentage of eligible hires who separate within their first 60 days.

An employee hired too recently to reach 60 days is not included in the eligible 60-day cohort.

90-Day Attrition Rate

The percentage of eligible hires who separate within their first 90 days.

180-Day Attrition Rate

The percentage of eligible hires who separate within their first 180 days.

Important Cohort Rule

Each attrition measure uses a **mature eligible-hire population**.

For example:

An employee hired 20 days ago cannot yet be evaluated for 90-day or 180-day attrition.

Why This Matters

Using eligible cohorts prevents recently hired employees from artificially lowering longer-term attrition rates.

Target Guidance

Formal organizational targets have not yet been established.

These measures should currently be treated as working baselines.

Section 2 — Executive Retention Insights

Business / Operational Question

Which retention risks and emerging workforce patterns require leadership attention?

What This Visual Shows

Dynamically generated retention intelligence based on the current filter context.

Insights may include:

- Separation volume compared with prior YTD
- Highest Division retention impact
- Highest Office retention impact
- State turnover differences
- Highest Supervisor retention impact
- Highest Job Title retention impact
- Early-tenure attrition
- Share of separations occurring within early tenure
- Data-quality issues

Insight Categories

Retention Risk
Material turnover increases or meaningful retention concentration.

Emerging Pattern
Developing workforce patterns requiring continued review.

Workforce Insight
Meaningful workforce context that may not represent immediate risk.

Data Quality
Source-data issues that may affect retention interpretation.

Important Note

Insight categories are not employee, supervisor, office, division, or performance ratings.

They identify analytical conditions requiring context.

Section 3 — Turnover Impact Index

Purpose

The Turnover Impact Index helps leadership prioritize retention investigation.

It is a **relative prioritization score**.

It is not a standard HR turnover metric or performance percentage.

Components

Component	Weight	What It Represents	Why It Matters
Turnover Rate	50%	Separations relative to average workforce headcount	Captures retention severity relative to workforce size
Separation Share	30%	Entity's share of total separations in the selected context	Shows how much the entity contributes to overall workforce loss

Component	Weight	What It Represents	Why It Matters
Separation Volume	20%	Number of employee separations	Prevents larger high-impact groups from being overlooked

The combined score ranges from:

0–100

Normalization

Each component is normalized relative to the highest value within the applicable peer comparison group.

The weighted normalized components are then combined.

Interpretation

Higher scores indicate greater relative retention impact within the current comparison group.

What the Index Does Not Mean

The Turnover Impact Index is not:

- Turnover Rate
- A performance percentage
- A supervisor rating
- A Division rating
- An Office rating
- An employee rating
- An industry benchmark

Why the Index Can Change with Filters

The index is relative to the current peer population.

Changing:

- Trend Analysis Period
- Office
- Division

- Workforce Group
- Supervisor

may change the comparison group and therefore the normalized score.

Important Note

Do not prioritize retention investigation based on Turnover Rate alone.

A very small team can produce an extremely high rate from only a few separations.

Use:

- Rate
- Volume
- Share
- Impact Index

together.

Section 4 — Turnover & Workforce

Turnover Rate by Month

Business / Operational Question

How is turnover changing over the selected period?

What This Visual Shows

Turnover Rate by Month Year.

Why This Matters

Use the chart to identify:

- Sustained increases
- Declining turnover
- Stable periods
- Seasonal patterns
- Isolated spikes

Review unusual monthly values alongside separation volume and workforce size.

Separations by Month

Business / Operational Question

How is separation volume changing over the selected period?

What This Visual Shows

Total Separations by Month Year.

Important Difference

Separation Volume asks:

How many employees left?

Turnover Rate asks:

How large was the loss relative to workforce size?

The two measures may identify different peak periods.

Separation Type

Business / Operational Question

What types of separations are driving workforce loss during the selected period?

What This Visual Shows

Separation activity according to the source-defined **Separation Type** field.

Applicable categories may include:

- Voluntary
- Involuntary
- Never Started

Why This Matters

Separation Type helps distinguish broad categories of workforce loss.

Different separation types may suggest different areas for additional investigation.

Important Note

Separation Type identifies a source-defined category.

It does not establish detailed separation cause.

Where available, validated separation-driver or separation-reason information would provide deeper context.

Never Started vs Hired, Never Started

The source-defined **Never Started** Separation Type should not automatically be assumed to be identical to the dashboard's **Hired, Never Started** same-day hire/separation rule.

They are separate analytical concepts unless HR formally defines them as equivalent.

Section 5 — Turnover Concentration

This section moves from overall turnover trends into organizational concentration.

Turnover Rate by Division

Business / Operational Question

Which divisions are experiencing the greatest turnover pressure?

What This Visual Shows

Turnover Rate by Division.

Supporting Context

Review Division results with:

- Turnover Rate
- Total Separations
- Separation Share
- Average Monthly Headcount
- Turnover Impact Index
- Executive Retention Insight

Important Note

The Division with the highest Turnover Rate may not have the highest combined organizational retention impact.

Turnover Rate by Office

Business / Operational Question

Which office locations are experiencing the greatest turnover pressure?

What This Visual Shows

Turnover Rate by Office Location.

How to Interpret It

Use:

- Rate
- Separation Volume
- Separation Share
- Average Monthly Headcount
- Turnover Impact Index

together.

A high Office rate does not automatically imply an office-management problem.

Section 6 — Early-Tenure Attrition

Early Attrition Rate

Business / Operational Question

How quickly are new employees separating within their first 30, 60, 90, and 180 days?

What This Visual Shows

A comparison of:

- 30-Day Attrition Rate
- 60-Day Attrition Rate
- 90-Day Attrition Rate
- 180-Day Attrition Rate

Why This Matters

Viewing milestones together helps leadership understand how early workforce loss accumulates after hire.

How to Interpret It

These measures should currently be treated as organizational baselines.

Formal red/green performance judgments should not be established until sufficient history exists.

Separations by Tenure Band

Business / Operational Question

At what stages of employee tenure are workforce losses most concentrated?

What This Visual Shows

Actual separation records grouped by tenure at separation.

Configured tenure bands include:

- 0–30 Days
- 31–60 Days
- 61–90 Days

- 91–180 Days
- 181 Days–1 Year
- 1–2 Years
- 2–5 Years
- 5–10 Years
- 10+ Years
- Unknown, where applicable

Important Difference from Early Attrition Rate

Early Attrition Rate asks:

What percentage of eligible hires separate by a specific employment milestone?

Separations by Tenure Band asks:

At what tenure stage did actual separation events occur?

The two analyses should not be interpreted as interchangeable.

Section 7 — Leadership & Retention

Turnover Rate by Supervisor

Business / Operational Question

Which supervisor teams are experiencing the greatest retention pressure?

What This Visual Shows

Turnover Rate by Unified Supervisor.

Supporting Context

Review:

- Turnover Rate
- Separation Volume
- Separation Share
- Team-size context
- Turnover Impact Index

Important Note

A high Supervisor Turnover Rate or Impact Index does not automatically indicate poor supervisor performance.

Possible contributing factors may include:

- Job mix
- Project conditions
- Team size
- Workforce tenure
- Hiring volume
- Location
- Workforce changes
- Job expectations
- Other operating conditions

The visual identifies a retention pattern requiring context.

Turnover Rate by Job Title

Business / Operational Question

Which job roles are experiencing the greatest turnover impact?

What This Visual Shows

Turnover Rate by Job Title.

Supporting Context

Review:

- Turnover Rate
- Separation Volume
- Separation Share
- Average Monthly Headcount
- Turnover Impact Index

Potential Areas for Additional Investigation

Depending on the role, further review may include:

- Recruiting
- Job expectations
- Onboarding
- Training
- Job fit
- Work conditions
- Career development
- Workforce demand

The dashboard identifies patterns.

It does not establish causes.

Section 8 — Separation Detail

Business / Operational Question

Which employee separations are contributing to the selected turnover and attrition results?

What This Table Shows

Employee-level separation records contributing to the selected analytical context.

Fields may include:

- Employee Name
- Worker No.
- Separation Date
- Effective Hire Date
- Tenure at Separation
- Separation Tenure Band
- State
- Division
- Office
- Supervisor
- Title

Why This Matters

Use the table to move from:

Dashboard signal → organizational pattern → individual records

Important Note

Employee-level records should be used for:

- Investigation
- Validation
- Source-data review
- Operational context

They should not be used in isolation to infer cause.

Section 9 — Hired, Never Started

Definition

The current working dashboard rule identifies a Hired, Never Started record when:

Hire Date = Separation Date

The rule is implemented as a supporting same-day hire/separation flag.

This analysis is currently treated as **Separation Detail**, not as a formal Early-Tenure Attrition KPI.

Hired, Never Started — Detail

Business / Operational Question

Which hires were recorded as separating on their hire date?

What This Table Shows

Same-day hire/separation records.

Fields may include:

- Employee Name

- Worker No.
- Separation Date
- Effective Hire Date
- Division
- Office
- Supervisor

Why This Matters

The table provides an employee-level view of same-day workforce loss.

Because the current number of records is small, the analysis should be treated as supporting separation detail rather than elevated to a primary executive attrition KPI.

Hired, Never Started — Job Title

Business / Operational Question

Which job roles are most affected by employees who are hired but never started?

What This Visual Shows

Same-day hire/separation records grouped by Job Title.

Why This Matters

Concentration within specific roles may help HR identify whether additional recruiting, candidate-commitment, onboarding, or pre-start review is appropriate.

Important Note

The visual identifies where the records are concentrated.

It does not determine why the employees did not begin sustained employment.

Section 10 — Estimated COER Employee Replacement Cost

The same replacement-cost methodology documented on Page 1 is repeated on Page 2 for direct retention context.

Business / Operational Question

What is the estimated financial impact of COER employee separations during the selected period?

Calculation

Applicable COER Separations × $5,400

Use the Page 1 replacement-cost assumptions table for component detail.

Page 2 Working-Baseline Guidance

Formal organizational thresholds have not yet been established for:

- Turnover Rate
- 30-Day Attrition Rate
- 60-Day Attrition Rate
- 90-Day Attrition Rate
- 180-Day Attrition Rate
- Separation Type mix
- Turnover Impact Index
- Estimated Replacement Cost

These measures should initially be used to establish organizational baselines and identify recurring patterns.

Page 3 — G&A Workforce Analysis

Page Purpose

The G&A Workforce Analysis page provides a workforce-planning view focused primarily on corporate and support functions.

The page is organized around the question:

How are workforce capacity, experience, and organizational structure evolving across G&A functions?

The page provides visibility into:

- Current workforce capacity
- Hiring and separations
- Workforce availability
- Organizational structure
- Workforce tenure
- Supervisor team size
- Institutional knowledge
- Management span
- Workforce planning

The default Workforce Group for Page 3 is G&A.

Page 3 Dashboard Filters

Current filters include:

- Trend Analysis Period
- Office
- Division
- Workforce Group
- Supervisor
- Employment Status

Trend Analysis Period

Controls applicable historical workforce-dynamics visuals.

Office

Limits applicable Page 3 results to the selected Office.

Division

Limits results to the selected Division.

Workforce Group

Page 3 is designed primarily around G&A.

The Workforce Group control can also support exploratory analysis where appropriate.

Supervisor

Limits applicable analysis to the selected Supervisor.

Employment Status

Limits supported visuals to the selected workforce status.

Available statuses may include:

- Active
- LOA
- Separated

Important Note

Some measures intentionally apply a specific workforce-status population.

For example:

- Active Employees uses Active only.
- Current workforce tenure measures may include Active + LOA.

A general status selection should therefore be interpreted within each metric's documented population.

Section 1 — Workforce Snapshot

Business / Operational Question

What is happening across our workforce today?

The Workforce Snapshot includes:

- Total Active Employees
- New Hires — Last 30 Days
- Separations — Last 30 Days
- Employees on LOA
- Net Workforce Growth
- Average Team Size

The first four metrics follow the same definitions documented on Page 1.

📈 Net Workforce Growth

What This Metric Represents

New Hires minus Separations within the applicable reporting context.

Calculation

Net Workforce Growth = New Hires − Separations

Current Reference

0

Interpretation

Positive values indicate workforce expansion.

Negative values indicate net workforce decline.

Zero indicates no net movement.

👥 Average Team Size

What This Metric Represents

The average number of active employees assigned to active supervisors.

Calculation

Active Employees Assigned to Supervisors ÷ Active Supervisor Count

Current Reference

12 employees per supervisor

Why This Matters

Average Team Size provides a broad view of management span and workforce structure.

Important Note

The reference of 12 is a working benchmark.

A lower or higher result should not automatically be interpreted as poor structure.

Review:

- Work complexity
- Geography
- Team experience
- Job type
- Organizational structure
- Supervisor responsibilities

Section 2 — Workforce Composition

This section shows where the G&A workforce is structurally concentrated.

Workforce by Division

Business / Operational Question

Which divisions have the largest workforce?

What This Visual Shows

Current workforce count by Division.

Why This Matters

The visual provides visibility into:

- Organizational scale
- Relative Division size
- Staffing concentration
- Support-function distribution

Workforce by Office

Business / Operational Question

Which offices have the largest workforce?

What This Visual Shows

Current workforce count by Office.

Why This Matters

Use the chart to understand:

- Geographic concentration
- Office staffing needs
- Corporate/support location dependencies
- Potential local HR or management-support needs

Workforce by Supervisor

Business / Operational Question

Which supervisors manage the largest teams?

What This Visual Shows

Current employee count by Unified Supervisor.

Why This Matters

The visual provides a direct view of supervisor team size.

Review larger and smaller teams in operational context rather than treating team size as a performance score.

Section 3 — Workforce Dynamics

This section explains how G&A workforce levels and workforce experience are changing.

Net Workforce Growth

Business / Operational Question

Is our workforce growing or shrinking over time?

What This Visual Shows

By Year Quarter:

- New Hires
- Separations
- Net Workforce Growth

Why This Matters

Quarterly analysis helps identify:

- Sustained growth
- Workforce contraction
- Replacement hiring
- Periods of limited net movement

Interpretation

Positive net growth
Hiring exceeded separations.

Negative net growth
Separations exceeded hiring.

Zero
Hiring and separations were equal.

Hiring vs Separations

Business / Operational Question

Are hiring levels keeping pace with workforce losses?

What This Visual Shows

New Hires and Separations side by side by Year Quarter.

How to Interpret It

Hires above separations
Hiring is outpacing workforce loss.

Separations above hires
Staffing may decline unless future hiring increases.

Similar values
Hiring may primarily be replacing workforce loss.

Workforce Tenure Distribution

Business / Operational Question

Is our workforce building long-term experience and stability?

What This Visual Shows

Employees grouped into tenure bands such as:

- Under 1 Year
- 1–3 Years
- 3–5 Years
- 5–10 Years
- 10+ Years

The visual may distinguish:

- Current Active Workforce
- Temporarily Unavailable
- Workforce Loss

Tenure Rule

Use Seniority Date when available.

Otherwise use Hire Date.

Current Workforce Treatment

Employees on LOA remain part of the current employed workforce for applicable tenure and maturity analysis.

Why This Matters

The visual provides insight into:

- Workforce maturity
- Institutional knowledge
- Newer-workforce concentration
- Long-term experience
- Potential succession exposure
- Early-retention exposure

How to Interpret It

A larger Under-1-Year population may indicate:

- Growth
- Increased hiring
- Onboarding demand
- Training demand

Larger long-tenure populations may indicate:

- Institutional knowledge
- Mature teams
- Potential succession-planning needs

Section 4 — Workforce Effectiveness

This section focuses on supervisor team structure and workforce experience.

Supervisor Direct Reports

Business / Operational Question

Are supervisors managing balanced and sustainable team sizes?

What This Visual Shows

The number of employees assigned to each Unified Supervisor.

Why This Matters

Span of control may affect:

- Supervisor workload
- Communication
- Coaching
- Employee support
- Operational oversight
- Management capacity

How to Interpret It

Larger teams may indicate:

- Broad responsibility
- Higher management workload
- An experienced self-sufficient team
- Structural concentration

Smaller teams may indicate:

- Specialized work
- Narrow functional scope
- Organizational design
- Geographic structure

Important Note

The dashboard does not currently establish that a particular supervisor team size is inherently sustainable or unsustainable.

Team-size results require operational context.

Average Workforce Tenure by Division

Business / Operational Question

Where is workforce experience and institutional knowledge concentrated?

What This Visual Shows

Average tenure of the current employed workforce within each Division.

Current Workforce Population

Applicable workforce tenure analysis includes:

- Active
- LOA

Tenure Rule

Use Seniority Date when available.

Otherwise use Hire Date.

Why This Matters

Higher average tenure may indicate:

- Greater experience
- Strong institutional knowledge
- Mature workforce structure

Lower average tenure may indicate:

- Recent growth
- Increased hiring
- Recent turnover

- Greater onboarding demand

Very high tenure may also warrant succession-planning review.

Section 5 — Leadership & Workforce Planning

This section provides additional context on workforce availability and team experience.

Workforce LOA by State

Business / Operational Question

How is leave of absence affecting workforce availability across California and Nevada?

What This Visual Shows

LOA Rate by State.

Calculation

LOA Rate = Employees on LOA ÷ Current Employed Workforce

Where Current Employed Workforce includes:

- Active
- LOA

Separated employees are excluded.

Why This Matters

A raw LOA count can be misleading when State populations differ materially.

LOA Rate standardizes temporary workforce unavailability relative to workforce size.

Interpretation

A higher rate means a larger share of the current workforce is temporarily unavailable.

It does not automatically indicate poor performance.

Target

No formal LOA Rate threshold has been established.

Workforce Experience by Supervisor

Business / Operational Question

Which supervisors lead the least experienced teams?

What This Visual Shows

Average tenure of current employees assigned to each Unified Supervisor.

Current Team Population

Applicable team-experience measures include:

- Active
- LOA

Tenure Rule

Use Seniority Date when available.

Otherwise use Hire Date.

Why This Matters

Lower-tenure teams may require:

- Additional onboarding
- Training
- Supervisor support
- Knowledge transfer
- Early-retention monitoring

Higher-tenure teams may provide stronger institutional knowledge but may also create succession-planning considerations.

Important Note

This visual describes **team experience**.

It does not measure supervisor performance.

Working Experience Categories

Average Team Tenure	Working Interpretation
7+ Years	Established Team
5–6.9 Years	Experienced Team
3–4.9 Years	Developing Team
2–2.9 Years	Growing Team
Below 2 Years	Emerging Team

These categories are interpretive working baselines rather than formal performance standards.

Page 3 Working-Baseline Guidance

Current Page 3 working benchmarks include:

Metric / Framework	Current Benchmark / Status
Employees on LOA	10
Net Workforce Growth	0
Average Team Size	12
LOA Rate	Working Baseline — No Formal Target
Workforce Experience Categories	Working interpretive ranges

Team size and tenure results should always be interpreted within organizational context.

Current Working Targets and Baselines

Metric	Current Target / Status
Employees on LOA	10
Average Team Size	12
Net Workforce Growth	0
Turnover Rate	Working Baseline — No Formal Target Yet
Workforce <1 Year	Contextual Indicator — No Formal Target Yet
Separations YTD	Contextual Indicator — No Formal Target Yet
Open Positions	Working Baseline — No Formal Target Yet
Open Requisitions	Working Baseline — No Formal Target Yet
Average Time to Hire	Working Baseline — No Formal Target Yet
Offer Acceptance Rate	Working Baseline — No Formal Target Yet

Metric	Current Target / Status
Estimated COER Employee Replacement Cost	Planning Estimate — No Performance Target
30-Day Attrition Rate	Working Baseline — No Formal Target Yet
60-Day Attrition Rate	Working Baseline — No Formal Target Yet
90-Day Attrition Rate	Working Baseline — No Formal Target Yet
180-Day Attrition Rate	Working Baseline — No Formal Target Yet
LOA Rate	Working Baseline — No Formal Target Yet
Turnover Impact Index	No Performance Target — Relative Prioritization Score

---

Quick Interpretation Reminders

- Higher hiring may represent expansion or replacement hiring.
- Higher separation volume should be reviewed by tenure, Office, Division, Supervisor, Job Title, and Separation Type.
- Turnover Rate should be reviewed with Average Monthly Headcount and Separation Volume.
- Turnover above 100% can occur in small or rapidly changing populations.
- Turnover Impact Index is a relative prioritization score, not a performance rating.
- Early Attrition Rates use mature eligible-hire populations.

- Separations by Tenure Band describe actual separation events rather than eligible-hire rates.
- Workforce <1 Year is not automatically unfavorable.
- Larger supervisor teams do not automatically indicate excessive span of control.
- Smaller teams may reflect specialization or organizational structure.
- Lower team tenure may reflect growth, hiring, turnover, or organizational change.
- LOA represents temporary workforce unavailability.
- LOA employees remain employed and are included in applicable current-workforce and tenure measures.
- Open Positions and Open Requisitions measure different recruiting concepts.
- Average Time to Hire currently measures Offer Accepted Date to Potential Start Date.
- Offer Acceptance Rate uses the selected offer cohort.
- Estimated Replacement Cost is a planning estimate rather than an accounting expense.
- Separation Type and Hired, Never Started are separate analytical concepts.
- Older historical data may be incomplete because legacy-data migration remains ongoing.
- Current and live metrics have stronger source coverage.
- Always check Last Refresh and active slicers before comparing dashboard results with another report.

Frequently Asked Questions

Why doesn't every KPI change when I change the Trend Analysis Period?

Some KPIs represent the current workforce or a fixed rolling period rather than selected-period historical activity.

Examples include:

- Total Active Employees
- Employees on LOA
- New Hires — Last 30 Days
- Separations — Last 30 Days

Historical trend measures, turnover analysis, selected-period separations, and applicable Talent Acquisition metrics are more likely to respond directly to the selected reporting period.

Why do the three dashboard pages sometimes show different values?

The pages are designed for different analytical purposes.

Page 1 provides an enterprise Executive Summary.

Page 2 is primarily COER-focused.

Page 3 is primarily G&A-focused.

Different visuals may also use:

- Different workforce populations
- Different reporting periods
- Current-state versus historical logic
- Rolling versus selected-period logic

Always check the active filters and metric definition before comparing values.

What does Workforce Group do?

Workforce Group allows applicable analysis to be limited to:

- COER
- G&A
- All

The classification is used across applicable workforce and Talent Acquisition analysis.

Page 2 primarily uses COER.

Page 3 primarily uses G&A.

What is COER?

Within the current dashboard framework, COER is the configured workforce grouping used primarily for field and revenue-generating operations.

The exact organizational classification should continue to be reviewed and finalized with HR.

What is G&A?

G&A refers to **General & Administrative** workforce functions.

The group primarily includes corporate and support functions rather than field/revenue-generating operations.

What is the difference between Active Employees and Current Workforce?

Active Employees include employees currently classified as Active.

Current Workforce may include:

- Active
- LOA

when the metric is intended to describe the broader currently employed population.

Why are employees on LOA included in some calculations?

LOA employees remain employed even though they are temporarily unavailable.

Metrics describing:

- Current workforce size
- Workforce tenure
- Workforce maturity
- Team experience

may therefore include Active + LOA.

How is Turnover Rate calculated?

Total Separations ÷ Average Monthly Workforce Headcount

Average Monthly Workforce Headcount is based on workforce snapshots across the selected period.

Why is average monthly headcount used?

Using only beginning and ending headcount can underrepresent workforce exposure when substantial hiring and separation activity occurs within the measurement period.

Monthly snapshots provide a more representative denominator.

Why can Turnover Rate be above 100%?

A workforce group may experience more separations during a period than its average workforce size.

This can happen when employees leave and are replaced repeatedly.

Turnover above 100% does not automatically indicate a calculation error.

What is the Turnover Impact Index?

The Turnover Impact Index combines:

- Turnover Rate — 50%
- Separation Share — 30%
- Separation Volume — 20%

It helps identify organizational areas with the greatest combined retention impact.

Is the Turnover Impact Index a percentage?

No.

It is a relative **0–100 prioritization score**.

A score of 100 means the entity has the highest combined normalized retention impact within the applicable peer comparison group.

It does not mean:

- 100% turnover
- Maximum business risk
- Poor performance

Why can the Impact Index change when filters change?

The Index is calculated relative to the current peer population.

Changing Office, Division, Supervisor, Workforce Group, or reporting period may therefore change the comparison group and normalized values.

Why aren't we using Turnover Rate alone to identify the highest-risk group?

Small groups may produce extremely high Turnover Rates from only a few separations.

The Impact Index adds:

- Separation Volume
- Separation Share

to provide broader organizational-impact context.

Why are the 30-, 60-, 90-, and 180-day attrition rates different?

Each measure evaluates whether an eligible hire separates by a different employment milestone.

Together, the four measures show how workforce loss accumulates during the first six months.

Why isn't every recent hire included in the 180-Day Attrition Rate?

An employee must have had enough time to reach 180 days before being included in the eligible population.

A recent hire cannot yet be evaluated for 180-day retention.

What is the difference between Early Attrition Rate and Separations by Tenure Band?

Early Attrition Rate asks:

What percentage of eligible hires separate by each milestone?

Separations by Tenure Band asks:

At what tenure stage did actual separation events occur?

What is Separation Type?

Separation Type is a source-defined classification used to group separation activity.

Current categories may include:

- Voluntary
- Involuntary
- Never Started

It provides broad separation context but does not necessarily identify detailed cause.

What does Hired, Never Started mean?

The current dashboard working definition identifies employees whose:

Hire Date = Separation Date

These records are shown as supporting Separation Detail.

Is Hired, Never Started the same as the Separation Type “Never Started”?

Not necessarily.

The Hired, Never Started analysis uses a date-based dashboard rule.

Never Started in Separation Type is a source-defined category.

They should only be treated as equivalent if HR formally confirms the definitions are aligned.

What is the difference between Open Positions and Open Requisitions?

Open Positions represents requested unfilled seats.

Open Requisitions counts distinct open recruiting requisitions.

One requisition may request more than one position.

Therefore, the metrics are expected to differ.

How is Average Time to Hire calculated?

The current Version 2.0 definition is:

Potential Start Date − Offer Accepted Date

The metric averages valid applicant-level durations for the applicable accepted-offer cohort.

Why doesn't Time to Hire start from Requisition Open Date?

HR finalized the Version 2.0 Time to Hire definition as the time between candidate offer acceptance and the planned start date.

The current KPI therefore does not use requisition-request date.

How is Offer Acceptance Rate calculated?

Offers Accepted ÷ Offers Extended

Offers Extended are based on applicants whose Offer Letter Sent date falls within the selected period.

Accepted offers must belong to that offer cohort and be accepted by the effective period end date.

What does Estimated COER Employee Replacement Cost represent?

It estimates the financial impact of applicable COER employee separation activity using a current working assumption of:

$5,400 per separation

The estimate includes:

- Separation administration
- Recruiting
- HR labor
- Screening
- Onboarding
- Training
- Equipment/setup
- Temporary coverage
- Ramp-up productivity loss

Is the $5,400 replacement cost an actual expense?

No.

It is a VCI HR planning assumption.

It should not be interpreted as:

- An accounting expense
- An exact cost for every employee
- A salary-based replacement calculation
- A universal industry benchmark

Why might Estimated Replacement Cost not equal total enterprise separations × $5,400?

The estimate is intended for the applicable COER/field-operations replacement-cost population.

Enterprise separation totals may include employees outside that population.

Why might Open Positions remain high even when hiring is strong?

Strong hiring and high open demand can exist simultaneously.

Possible reasons include:

- Organizational growth
- Multiple positions requested per requisition
- New workforce demand
- Replacement hiring
- Requests created faster than positions are filled

Open Positions should therefore be reviewed with hiring volume and Time to Hire.

Does a high Average Team Size mean a supervisor is overloaded?

Not necessarily.

Team size should be reviewed alongside:

- Work complexity
- Team experience
- Geography
- Organizational structure
- Supervisor responsibilities

The dashboard identifies possible planning questions, not automatic conclusions.

Does low team tenure indicate poor supervisor performance?

No.

Lower team tenure may reflect:

- Recent hiring
- Workforce expansion
- New organizational functions
- Recent turnover
- Business growth

The measure identifies team-experience conditions, not supervisor performance.

Why might older historical results be incomplete?

VCI's workforce history spans paper-based processes, UKG, and the current SAP environment.

Historical migration remains ongoing.

Older dashboard periods therefore represent the historical records currently available rather than a guarantee of complete workforce history.

Can current dashboard metrics still be trusted if older historical data is incomplete?

Current and live metrics are derived from HR's actively maintained workforce files and have undergone validation.

Historical completeness and current-state reliability should therefore be treated as separate considerations.

Why might Power BI differ slightly from another HR report or presentation?

Differences may result from:

- Reporting-date timing
- Refresh timing
- Source-file timing
- Filter state
- Workforce Group
- Population definitions
- Methodology

Before assuming an error, confirm the exact reporting context used by both sources.

What should I do if dashboard numbers look unusual?

1. Check Last Refresh.
2. Review Trend Analysis Period.
3. Check Workforce Group.
4. Check Office and Division.
5. Check Supervisor or Employment Status where applicable.
6. Use Clear All Slicers if needed.
7. Confirm the metric's population and reporting-period definition.
8. Review employee-level detail where available.
9. Confirm source-data timing.
10. Escalate for validation if the result remains unexplained.

Data Sources and Analytical Model

Workforce Master

Workforce Master serves as the primary integrated workforce table.

It consolidates applicable employee records from:

- VCI Active Employee Report
- VCI LOA Employee Report
- VCI Separation Employee Report

Authoritative Workforce Status

Workforce Master uses a standardized Workforce Status framework including:

- Active
- LOA
- Separated

Effective Hire Date

Effective Hire Date uses:

Seniority Date when available

otherwise:

Hire Date

This provides a consistent tenure baseline.

Historical Workforce Reconstruction

Because current Workforce Status alone cannot recreate prior workforce states, historical headcount measures use employment dates.

An employee is considered employed at a historical snapshot when:

- Hire Date is on or before the snapshot date.
- Separation Date is blank or after the snapshot date.

For Active-only historical populations, applicable LOA dates are also considered so employees on LOA at the snapshot are not counted as Active.

Applicant Master

Version 2.0 introduces **Applicant Master** as the consolidated applicant-level Talent Acquisition table.

Applicant Master combines:

- Applicant Onboarding Tracker
- Completed Applicant Onboarding Tracker

Applicant records move between the active onboarding and completed onboarding source states.

Applicant Master therefore provides the consolidated analytical applicant population.

Applicant Stage

Current stages include:

- Applicant Onboarding
- Completed Onboarding

Applicant Identifier

Because a dedicated Applicant ID is not currently maintained in the source workflow, a normalized Applicant Name Key is used as the practical current analytical identifier.

This should continue to be monitored for duplicate-name risk.

Position / Seat Request Form

The Position / Seat Request Form provides the position/requisition-level Talent Acquisition demand source.

Key analytical fields include:

- Assigned Recruiter
- Date Position Filled
- Date Requested
- Division
- Job Title
- No. of Positions Needed
- Position Number
- Reporting Office Location
- Req Number
- Supervisor Name

The source operates at a position/requisition-request grain rather than an applicant grain.

Position Number should not be assumed to be unique because the same position type may be requested more than once.

Workforce Group Dimension

Version 2.0 introduces a shared Workforce Group dimension containing:

- COER
- G&A

The dimension supports consistent filtering across applicable:

- Workforce data
- Applicant data
- Position/requisition data

This prevents the need to force direct fact-to-fact relationships between workforce and recruiting sources.

Talent Acquisition Model Note

Applicant and recruiting sources should not be directly linked to Workforce Master using identifiers that have not been validated as equivalent.

Recruiting metrics therefore operate within their own source domain while sharing common reporting dimensions where appropriate.

Calendar and Date Logic

Historical workforce and event-based measures use the dashboard Calendar framework.

The Trend Analysis Period supplies the applicable selected start and end dates.

Where a selected period extends beyond the current date, applicable measures may cap the effective reporting end at **Today** to avoid reporting future activity that has not occurred.

Current-State vs Historical Logic

Not all metrics use the same time logic.

Current-State Measures

Examples:

- Total Active Employees
- Employees on LOA

These answer:

What is the workforce state now?

Rolling Measures

Examples:

- New Hires — Last 30 Days
- Separations — Last 30 Days

These answer:

What happened during the most recent rolling period?

Selected-Period Measures

Examples:

- Turnover Rate
- Net Workforce Growth
- Average Time to Hire
- Offer Acceptance Rate
- Estimated Replacement Cost

These answer:

What occurred within the selected analytical period?

Snapshot Measures

Examples:

- Open Positions
- Open Requisitions

These answer:

What was open as of the selected end date?

Understanding these differences is essential when comparing dashboard metrics.

Metric Change Log

Use this log whenever a metric calculation, definition, weighting, population, reporting period, interpretation, or name changes.

Metric / Framework	Change Type	Previous Definition	Updated Definition	Reason for Change	Version
Dashboard Reporting Framework	Major Structural Redesign	Enterprise / Workforce Operations / Retention & Turnover	Enterprise Executive Summary / COER Workforce Analysis / G&A Workforce Analysis	Align reporting architecture with HR leadership workforce framework	2.0
Workforce Group	New Classification	Not available	COER / G&A shared workforce classification	Support workforce-group reporting	2.0
Talent Acquisition	New Analytical Domain	Not included	Open Positions, Open Requisitions, Average Time to Hire, Offer Acceptance Rate	Expand executive workforce planning into recruiting demand and conversion	2.0
Open Positions	New Metric	Not included	Unfilled requested positions as of	Show outstanding hiring demand	2.0

Metric / Framework	Change Type	Previous Definition	Updated Definition	Reason for Change	Version
			applicable reporting date		
Open Requisitions	New Metric	Not included	Distinct open Req Numbers as of applicable reporting date	Show recruiting workload	2.0
Average Time to Hire	New Metric	Not included	Potential Start Date − Offer Accepted Date	Establish HR-approved recruiting-cycle measure	2.0
Offer Acceptance Rate	New Metric	Not included	Offers Accepted ÷ Offers Extended for selected offer cohort	Measure offer conversion	2.0
Estimated COER Employee Replacement Cost	New Metric	Not included	Applicable COER Separations × $5,400	Translate workforce loss into planning-cost impact	2.0

Metric / Framework	Change Type	Previous Definition	Updated Definition	Reason for Change	Version
Executive Alerts	Framework Redesign	Primarily operational readiness alerts	Talent Acquisition, replacement cost, offer conversion, LOA capacity, and workforce-flow alerts	Align alerts with redesigned Page 1 executive framework	2.0
Separation Type	New Visual	Not included	Separation analysis by source-defined Separation Type	Expand understanding of workforce loss	2.0
Hired, Never Started	New Supporting Analysis	Not included	Hire Date = Separation Date	Surface same-day hire/separation records	2.0
Turnover Impact Helper Calculations	Calculation Alignment	Helper calculations could normalize incorrectly under nested ranking context	Highest-impact helpers aligned to peer-level impact calculation	Ensure Executive Retention Insights match chart impact values	2.0

Metric / Framework	Change Type	Previous Definition	Updated Definition	Reason for Change	Version
Turnover Rate	Production Methodology Retained	Endpoint-average headcount during early development	Separations ÷ Average Monthly Workforce Headcount	More representative workforce exposure denominator	1.1 / Retained 2.0
Early Attrition	Cohort Methodology Retained	Not previously available	Eligible-hire milestone cohorts	Prevent immature hires from diluting attrition rates	1.1 / Retained 2.0
G&A Page	Major Page Redesign	Workforce Operations	G&A Workforce Analysis	Shift from operational readiness toward capacity, structure, experience, and planning	2.0
COER Page	Major Page Redesign / Repositioning	Retention & Turnover	COER Workforce Analysis	Focus retention and separation analysis on primary field/revenue-generating workforce	2.0

Target Change Log

Use this log whenever a target, threshold, or interpretation range is changed.

Metric	Previous Target / Status	Current Target / Status	Reason / Notes	Version
Employees on LOA	10	10	Retained working planning benchmark	2.0
Average Team Size	12	12	Retained working structural reference	2.0
Net Workforce Growth	0	0	Neutral workforce-movement reference	2.0
Turnover Rate	No Formal Target	Working Baseline — No Formal Target	Continue baseline observation	2.0
30-Day Attrition Rate	No Formal Target	Working Baseline — No Formal Target	Additional history required	2.0
60-Day Attrition Rate	No Formal Target	Working Baseline — No Formal Target	Additional history required	2.0
90-Day Attrition Rate	No Formal Target	Working Baseline — No Formal Target	Additional history required	2.0

180-Day Attrition Rate	No Formal Target	Working Baseline — No Formal Target	Additional history required	2.0
LOA Rate	No Formal Target	Working Baseline — No Formal Target	Continue observing State-level availability patterns	2.0
Turnover Impact Index	No Performance Target	Relative Prioritization Score	Comparative analytical framework	2.0
Open Positions	N/A	Working Baseline — No Formal Target	New v2.0 metric	2.0
Open Requisitions	N/A	Working Baseline — No Formal Target	New v2.0 metric	2.0
Average Time to Hire	N/A	Working Baseline — No Formal Target	New v2.0 metric	2.0
Offer Acceptance Rate	N/A	Working Baseline — No Formal Target	New v2.0 metric	2.0
Estimated Replacement Cost	N/A	Planning Estimate — No Performance Target	New financial-impact planning measure	2.0

Data Source Change Log

Use this log whenever a source file, field, transformation, refresh method, ownership rule, or reporting process changes.

Data Source / Model Component	Change Type	Previous State	Updated State	Reason / Expected Impact	Version
Workforce Master	Existing Integrated Source	Active / LOA / Separation workforce integration	Retained as authoritative workforce analytical source	Preserve centralized workforce model	2.0
Applicant Onboarding Tracker	New Source	Not included	Added to Applicant Master	Support Talent Acquisition analysis	2.0
Completed Applicant Onboarding Tracker	New Source	Not included	Added to Applicant Master	Preserve applicant records after onboarding completion	2.0
Applicant Master	New Consolidated Source	Separate onboarding states	Consolidated applicant analytical table	Support applicant-level TA measures	2.0
Position / Seat Request Form	New Source	Not included	Added as requisition/position demand source	Support Open Positions	2.0

Data Source / Model Component	Change Type	Previous State	Updated State	Reason / Expected Impact	Version
				and Open Requisitions	
Workforce Group	Added Field / Classification	No COER/G&A classification	COER/G&A classification added to applicable data	Enable group-level reporting	2.0
Workforce Group Dimension	New Shared Dimension	Not available	Shared COER/G&A filter dimension	Filter workforce and TA domains consistently	2.0
Separation Type	Added Analytical Field	Not visualized	Added to separation analysis	Distinguish broad workforce-loss categories	2.0
Workforce Master Relationships	Model Simplification	Multiple auto-detected or fact-to-fact paths possible	Workforce Master retained as central workforce hub with controlled relationship direction	Reduce ambiguity and improve filter consistency	2.0

Validation Checklist for Source Changes

Before a source or model change is released, confirm:

- Required columns are present.
- Employee identifiers are formatted consistently.
- Applicant identifiers are reviewed for duplicate risk.
- Position and requisition identifiers use appropriate data types.
- Date fields use valid Date types.
- Row counts are reasonable.
- Unique employee and applicant counts are reasonable.
- Blank identifier counts are reviewed.
- Duplicate records are evaluated.
- Relationships remain valid.
- Workforce Group classifications remain valid.
- Key workforce measures are retested.
- Talent Acquisition measures are retested.
- Organizational filters still work.
- Trend Analysis Period interactions work as intended.
- Executive Alert logic remains aligned with KPI calculations.
- Replacement-cost scope remains aligned with the approved COER population.
- The dashboard refresh completes successfully.

Versioning Rules

Major Version

Increase the first number when there is a material dashboard or framework change that substantially alters methodology, structure, audience design, source architecture, or historical comparability.

Examples:

1.0 → 2.0

Use a major version for:

- Major dashboard redesign
- Fundamental reporting-framework change
- Major source-model restructuring
- Material KPI methodology redesign
- Composite-score redesign
- Significant weighting redesign
- Replacement of a primary data source
- Changes materially affecting historical comparability

- Material redesign of executive reporting audiences or pages

Version 2.0 qualifies as a major version because it changes:

- Dashboard architecture
- Primary page purposes
- Workforce population framework
- Data-source scope
- Talent Acquisition integration
- Executive reporting content

Minor Version

Increase the second number for additive or non-breaking enhancements.

Examples:

2.0 → 2.1

Use a minor version for:

- New metrics using approved methodology
- New supporting visuals
- Target adjustments
- Threshold changes
- Definition clarification
- Added interpretation guidance
- FAQ additions
- Visual name changes
- Visual placement changes
- Additional source fields
- Reporting-period enhancements
- Usability improvements

Draft Versions

Draft versions may use suffixes such as:

- 2.0 Draft
- 2.0 Review
- 2.0 RC1

Draft versions should not replace the current approved guide until review is complete.

Document Review and Approval

Initial Version 2.0 Review Frequency

During the first three to six months of Version 2.0 use, review the dashboard and guide monthly.

The review should consider:

- User feedback
- Workforce Group classification accuracy
- COER/G&A population alignment
- Talent Acquisition source quality
- Open Position and Requisition interpretation
- Average Time to Hire baseline stability
- Offer Acceptance Rate baseline stability
- Replacement-cost methodology
- Replacement-cost population scope
- Turnover baseline stability
- Early-Tenure Attrition patterns
- Separation Type completeness
- Hired, Never Started patterns
- Turnover Impact Index usefulness
- Executive Alert usefulness
- G&A team-size benchmarks
- G&A workforce-experience patterns
- Historical-data migration progress
- Separation-data quality
- Additional requested workforce analytics

Ongoing Review Frequency

After the dashboard stabilizes, review this guide at least quarterly or whenever a material dashboard change occurs.

Recommended Review Participants

Depending on the change, reviewers may include:

- Director of Human Resources
- HR leadership
- Talent Acquisition leadership
- HR dashboard owner

- Data or reporting owner
- Operational leadership
- Relevant source-data owners
- Executive approver

Change-Control Notice

The dashboard and this guide must remain aligned.

Any approved change to a:

- Metric
- Calculation
- Target
- Threshold
- Weight
- Data source
- Field
- Workforce Group classification
- Workforce-status rule
- Recruiting definition
- Reporting period
- Slicer behavior
- Visual interaction
- Interpretation
- Visual name
- Visual placement
- Dashboard page
- Replacement-cost assumption

should be updated in both Power BI and this guide.

Changes to the following Version 2.0 frameworks should be explicitly documented:

- COER/G&A Workforce Group classification
- Turnover methodology
- Average Monthly Headcount methodology
- Early-Attrition cohort methodology
- Turnover Impact Index weighting or normalization
- Separation Tenure Bands
- Executive Retention Insight prioritization
- Executive Workforce Alert rules

- Active versus Active + LOA population rules
- Open Position methodology
- Open Requisition methodology
- Time to Hire methodology
- Offer Acceptance cohort methodology
- Replacement-cost amount or cost components
- Hired, Never Started definition
- Separation Type source definition
- Talent Acquisition source integration
- Historical-data availability assumptions
- Trend Analysis Period behavior

Changes to Turnover Impact Index weighting, Time to Hire definition, Workforce Group classification, or replacement-cost methodology should be treated as material methodology changes because they may alter interpretation or historical comparability.

Support and Feedback

During the Version 2.0 working-baseline period, users are encouraged to document:

- Questions about metric definitions
- Workforce Group classification concerns
- Targets that appear too strict or too lenient
- Unexpected results
- Retention patterns requiring additional explanation
- Talent Acquisition questions
- Replacement-cost questions
- Missing fields
- Data-quality concerns
- Historical-data concerns
- Suggested dashboard improvements
- Additional FAQ questions
- Workforce-planning questions
- Separation-driver needs

Feedback will help HR Analytics & Reporting establish stronger organizational baselines, improve interpretation guidance, and enhance future dashboard versions.

End of Guide

Version 2.0 represents a major redesign of the **VCI Executive HR Dashboard** and establishes the current working baseline for enterprise workforce reporting.

The dashboard now provides three complementary analytical perspectives:

Executive HR Dashboard
Enterprise workforce health, movement, Talent Acquisition, replacement-cost impact, distribution, and leadership alerts.

COER Workforce Analysis
Retention, turnover, early-tenure attrition, workforce-loss concentration, separation type, Hired/Never Started analysis, replacement-cost impact, and employee-level separation detail.

G&A Workforce Analysis
Workforce capacity, composition, movement, tenure, team structure, workforce availability, experience, and workforce planning.

Targets, population classifications, thresholds, cost assumptions, and interpretation guidance may continue to evolve as HR and leadership review additional data and establish more representative organizational baselines.

The dashboard and this reference guide should remain aligned as those decisions are made.

VCI Executive HR Dashboard | Version 2.0 | Working Baseline | Internal Use Only

---

Source basis: the v1.1 Reference Guide establishes the detailed documentation structure, methodology history, governance, and interpretation framework, while the uploaded Version 2.0 dashboard establishes the current three-page design, Workforce Group framework, Talent Acquisition section, COER replacement-cost analysis, COER retention page, and G&A workforce-planning page.
